VORWORT.

Der verstorbene Dr. N. M. Kam, früher Observator der Leidener Sternwarte, seit 1866 Docent der Mathematik und Physik am Gymnasium in Schiedam, reichte in der Sitzung der math. phys. Cl. der Akademie der Wissenschaften in Amsterdam, 1894 Mei 26, in Anschluss an seinen Catalog der Sterne aus Band 1—66 der Astron. Nachrichten, bei der Akademie einen neuen Catalog von Sternen, deren Oerter durch selbständige Meridianbeobachtungen bestimmt worden sind, aus Band 67 bis 112 der Astron. Nachrichten, reducirt auf 1875,0, zur Veröffentlichung ein.

In der Sitzung von 1894 Juni 30 fasste die Akademie, infolge eines Gutachtens der Herren J. C. A. Oudemans und J. C. Kapteyn, in welchem der hohe wissenschaftliche Werth dieses Catalogs betont wurde, den Beschluss die Publication zu übernehmen, und, obwohl das Manuscript noch nicht ganz fertig war, wurde der Druck sofort in Angriff genommen.

Leider war es dem eifrigen und gewissenhaften Gelehrten nicht vergönnt die Herausgabe seines Werkes zu erleben, da er kaum 2 Jahre später nach einer kurzen Krankheit, 1896 März 4, starb, als der Druck des Catalogs bis S. 144, die ersten 9 Stunden in R. A. enthaltend, abgedruckt vorlag. Bald nach dem Tod meines hochverehrten Freundes empfing ich von seinen Verwandten, seiner Schwester und seinen Brüdern, das Manuscript und sonstige sich auf den Catalog beziehenden Documente und Briefe, und da niemand anders die weitere Herausgabe des Catalogs übernehmen konnte, entschloss ich mich, obwohl ich nur sehr wenig Zeit darauf verwenden konnte, die Publication, so weit meine anderen Arbeiten es gestatteten, fortzusetzen.

Es stellte sich heraus, dass der Manuscript-Catalog zum grössten Theile fertig war. Die definitiven Oerter mit Präcession u. s. w., so wie die Quellen aus denen sie entlehnt sind, waren alle in Tabellen eingetragen, nur fehlte das 3e Glied der Präcession für die letzten 6 Stunden, welche Prof. J. C. Kapteyn die Güte hatte berechnen zu lassen. Weiter fanden sich unter Kam's Papieren mehrere Bemerkungen, Sterne seines Catalogs betreffend, bei denen über die Richtigkeit der Oerter oder sonstige Angaben Zweifel bestand, welche durch Beobachtungen, Berechnungen, oder Nachschlagen in anderen Catalogen aufgehoben werden musste.

Von den Noten war ein Theil N°. 1—N°. 661 und ferner N°. 951 —N°. 1243 in definitiver Form redigirt, und für die übrigen Sterne waren die Bemerkungen, dem Hauptinhalt nach, zusammengestellt. Ferner fand ich verschiedene Briefe und Tabellen von mehreren Astronomen, besonders von Dr. Knorre, Dr. Palisa und dem verstorbenen Dr. Romberg, woraus ich viele Details über die Beobachtungen ableiten konnte. Im April 1897 habe ich mit der Bearbeitung des Manuscripts und der Fortsetzung des Drucks einen Anfang gemacht, und ich bedauere lebhaft, dass, theils durch meine vielen anderen Arbeiten, theils auch durch den langsamen Fortgang des Druckes, erst jetzt der Band abgeschlossen werden kann.

Prof. J. A. C. Oudemans hatte die Güte während einiger Zeit die Correcturbogen zu lesen und später ist auch Herr Pannekoek mir dabei behülflich gewesen. Diesen beiden Herren, so wie Prof. J. C. Kapteyn, der, wie bereits erwähnt, das 3e Glied der Präcession für einen Theil der Sterne hat berechnen lassen, meinen besten Dank.

Es ist mir unmöglich gewesen alle Zahlen in Kam's Catalog zu controliren; wenn kein besonderer Anlass vorlag Fehler zu vermuthen, habe ich die von Kam niedergeschriebenen Zahlen unverändert beibehalten und nur einige augenfällige Fehler verbessert. Die grosse Sorgfalt mit welcher Kam alle Zahlen doppelt berechnet und controlirt hat, bietet jedoch eine gute Garantie für die Richtigkeit seiner Zahlen, Reductionen und Berechnungen. So weit diese von mir selbst herstammen, habe ich dieselben immer durch doppelte Rechnung controlirt.

42376m

Die von Kam und von mir nach dem Druck gefundenen Berichtigungen und Zusätze habe ich dem Vorworte folgen lassen.

Die Beobachtungsresultate und die Details der Beobachtungen sind zum grössten Theil Druckschriften entlehnt, zum Theil jedoch hat Kam und habe auch ich später den oben erwähnten brieflichen Mittheilungen von verschiedenen Astronomen über neue Beobachtungen, über Fehler in früheren Angaben, über die Zahl der Beobachtungen, Sterngrösse, Epoche, u. s. w. viel entlehnen können. Im Namen meines verstorbenen Freundes bringe ich diesen Herren, deren Briefe ich in Kam's Nachlass fand, meinen lebhaften Dank, namentlich den Herren Prof. A. Auwers, Dr. E. F. v. d. S. Bakhuyzen, Prof. E. Becker, Prof. H. Bruns, Prof. Deichmüller, Prof. J. C. Kapteyn, Prof. V. Knorre, Dr. J. Palisa, Herrn A. Pannekoek, Dr. Peter und Herrn Lector J. H. Wilterdink, sowie den verstorbenen Herren Prof. Schur und Dr. Romberg; dem letzteren verdankte Dr. Kam besonders zahlreiche Mittheilungen.

Sehr bedauere ich über die Bearbeitung des Catalogs wenig Einzelheiten mittheilen zu können. Bei der Einreichung im Jahre 1894 hatte Kam seiner Arbeit eine Einleitung vorangeschikt, welche, nach dem Bericht der Berichterstatter, interessante Bemerkungen u. a. über die Art der Beobachtungen und Reductionen an den 43 in Kam's Catalog erwähnten Sternwarten enthielt. Aber weder die Durchmusterung seiner Papiere, noch die Nachforschungen bei seinen Verwandten und bei der Akademie haben mir über diese Einleitung Aufschluss geben können.

Ueber die Einrichtung des Catalogs kann ich Folgendes mittheilen. Sie ist eine andere als die des ersten Catalogs. Kam hat die Unterabtheilung in drei Verzeichnisse: 1°. Vollständige Meridianbeobachtungen, 2°. selbständige Meridianbeobachtungen von Sternen, welche mit Sternpositionen aus anderen Quellen verbunden worden sind, 3°. unvollständige Meridianbeobachtungen, nicht beibehalten, sondern alle Positionen in einen Catalog vereinigt. Auch hat Dr. Kam die Vergleichung mit anderen Catalogspositionen und alles was er sonst über den Stern zu bemerken hatte zusammengestellt, oder wenn nöthig in die Noten aufgenommen.

Die Angaben für jeden Stern finden sich auf zwei einander gegenüberstehenden Seiten. Auf der linken Seite findet man:

Col. 1 die Catalognummer;
Col. 2 die Nummer der nördl. oder südl. Bonner Durchmusterung, wenn der Stern sich in diesen Catalogen findet;
Col. 3, 4 und 5 die Grösse nach der B. D., nach dem Band der Astron. Nachrichten, dem der Catalogsort entlehnt ist, und nach einem zweiten Verzeichniss oder Quelle, in Col. 4 der rechten Seite erwähnt;
Col. 6 enthält die Epoche der angestellten Beobachtung;
Col. 7 die Epoche, auf welche die Beobachtung in den A. N. reducirt ist;
Col. 8 die auf 1875,0 reducirte mittlere A. R.;
Col. 9 die Zahl der Beobachtungen in A. R.;
Col. 10, 11 und 12 die Präcession, variatio saecularis und das dritte Glied in A. R.
Col. 13 bis 17 enthalten dieselben Angaben für die Declination.

Auf der rechten Seite findet man:

Col. 1 die Catalognummer;
Col. 2 Band und Seite der A. N., der den auf der linken Seite mitgetheilten Ort enthält. Wenn die Resultate derselben Beobachtung an zwei oder mehreren Stellen in den A. N. mitgetheilt sind, werden diese alle erwähnt.
Col. 3 enthält den Namen des Beobachtungsorts und wo möglich auch den des Beobachters.
Col. 4 enthält das Verzeichniss, welches eine zweite Position desselben Sterns enthält, oder die Art der Beobachtung, wodurch solch eine zweite Position erhalten ist.

Col. 5 und 6 enthalten die Secunden, oder, wo diese fehlen, die Minuten dieser zweiten Position in A. R. und Declination.

Col. 7 enthält die Bemerkungen und den Nachweis über die Noten am Schluss, nebst Angaben über weitere Positionen in anderen Catalogen, E. B., Duplicität, u. s. w.

Wie man aus Col. 4 „Quelle" ersieht, hat Dr. Kam sein möglichstes gethan um durch Nachsuchen in anderen Catalogen, oder wo dieses nicht zum Ziele führte, durch Nachsuchen am Himmel oder durch specielle Refractor- und Meridian-Beobachtungen die Richtigkeit der Catalogspositionen zu prüfen; theilweise hat er selbst dazu einige Male am Leidener Refractor beobachtet; die meisten Beobachtungen sind jedoch auf seine Bitte von anderen Astronomen ausgeführt worden.

Noch zu erwähnen ist, dass die Reductionen auf das mittl. Aeq. 1875,0 alle mit der Struve'schen Präcession berechnet, und die Positionen van Lalande aus der Histoire Céleste mit Hülfe von v. Astens Tafeln reducirt sind.

Die Abkürzungen der in den Noten und Bemerkungen der Cataloge und Sternverzeichnisse angeführten Titel sind zum Theile selbstverständlich; ich habe sie jedoch in einer Tabelle S. VI zusammengestellt, und obwohl nicht immer vollkommen dieselben Abkürzungen angenommen sind, wird es doch leicht sein in dem Verzeichniss den Titel des entsprechenden Catalogs zu finden.

Leiden, Sept. 1901. H. G. VAN DE SANDE BAKHUYZEN.

NOTEN.

Seite 332 sind folgende drei Noten hinzuzufügen.

Nr. 982. Die Königsberger Declination ist nach Weisse und nach Berlin A. G. C. B. ungefähr 10″ zu gross. Dieses wird bestätigt durch die Vergleichung des aus dieser Position abgeleiteten Ortes des Cometen 1867 I, Februari 4, mit den Oertern an demselben Abend in Königsberg und Berlin mittelst anderer Vergleichsterne bestimmt.

„ 985. Berlin A. G. C. B. hat $2^h\,56^m\,41^s.96$, 19° 37′ 17″.1 Ep. 1870.6, 2 Beob.

„ 991. Dieser Stern findet sich nicht in dem Verzeichniss A. N. 69 S. 68 der von Romberg in Berlin bestimmten Vergleichsterne.

Noten zum vorstehenden Catalog.

Nr.

7 Eigenbewegung $+0^s.019$ $-0''.02$ nach Porter Cat. Prop. Mot. Nr. 7.
$+0.0231$ -0.047 „ Stumpe A. N. **125**, S. 395.

18 Der Stern hat wahrscheinlich E. B. wie folgende Positionen zeigen:

Lalande 47378	$9^m\ 0^h\ 3^m\ 33^s.84$	$+\ 7°\ 52'\ 61''.3$		1794.9
Weisse$_1$ 0^h 25, B. Z. 111		33.62	56.8	1824.8
Paris Cat.$_2$ 77	8-9	33.01	58.1	1857.8
Kam 19 A. N. **56**, 111		33.34	61.3	1861.8
Paris Cat.$_3$ 77	8-9	33.12	57.0	1874.8

32 In keinem andern Catalog verzeichnet; der Unterschied mit Bessel in A. R. daher nicht zu entscheiden. Nach B. D. scheint die A. R. in A. N. richtig zu sein. Bessel's Ort nach Weisse ist A. N. **101**, S. 196 für den Planeten (152) Atala benutzt, die Position des Planeten ist jedoch zwischen Klammern mitgetheilt worden, weil eine Neubestimmung des Vergleichsterns wünschenswerth war. Die Neubestimmung ist der im Catalog angegebene Ort.

42 Der Ort nach A. Ö. **90** ist für 1875.0: $0^h\ 6^m\ 10^s.42 + 56°\ 31'\ 57''.4$; 8^m.

44 Dieser Stern is mehrere Male vergebens von Herrn Observator Wilterdink am Himmel gesucht. Dr. Peter hat die Beobachtung in den Tagebüchern nachgesucht, und gefunden dass die Meridian-Beob. dem Planeten (90) Antiope angehört. Nach dieser Mittheilung is die scheinbare Position des Planeten für 1866 Oct. 6: $0^h\ 5^m\ 52^s.60$ — $2°\ 51'\ 11''.0$, Culminationszeit Leipzig.
Cf. auch A. N. **134**, S. 223.

48 Von Herrn Wilterdink an mehreren Abenden vergebens am Himmel gesucht. Dr. Peter hat mir nachher mitgetheilt, dass die Meridianbeob. dem Planeten (90) Antiope angehört. Danach ist der scheinbare Ort dieses Planeten für 1866 Oct. 5: $0^h\ 6^m\ 36^s.21$ — $2°\ 47'\ 42''.2$ Grösse 11.7, gültig für die Culminationszeit Leipzig. Cf. A. N. **134**, S. 223.

50 Die angegebene Position in den A. N. ist nicht richtig; nach den Tagebüchern ist der Ort nach beiden Bestimmungen:

1866.0 $0^h\ 6^m\ 46^s.45$ $-2°\ 44'\ 54''.3$
$46^s.62$ $53''.9$
} Mittel $46^s.54$, $54''.1$ stätt 50^s09, $31''.0$

wie Herr Wilterdink nachgewiesen hat. Diese Correctur wird bestätigt durch den Dunsink Cat.

Nr.

53 Mehrere Male von Herrn Wilterdink am Himmel vergebens gesucht. Dr. Peter theilte mir nachher mit, dass die Meridianbeob. eine sehr unsichere Bestimmung des Planeten Antiope betrifft. Die scheinbare Position dieses Planeten ist hiernach für 1866 Oct. 4: $0^h\,7^m\,16^s.17 - 2°\,42'\,7''.0$ Grösse 11.8, gültig für die Culminationszeit in Leipzig. Cf. auch **A. N. 134**, S. 223.

80 Nach Argelander's Cat. von 250 Sternen Nr. 3 beträgt die E. B. $+ 0^s.0070 + 0''.025$.

87 Die Existenz dieses Sterns ist durch einen annäherend von Herrn Wilterdink angestellten Mikr.-Anschluss an B. D. + 3°28, $9^m.2$, am 16 Jan. 1892 gesichert.

118 B. B. VI Seite [36] wird diese Correctur von Argelander angegeben und bestätigt durch Weisse$_1$ $0^h.243$, B. Z. 40 dessen Ort für 1875.0: $0^h\,15^m\,23^s.93 + 0°\,13'\,30''.2$; 9^m.

139 Durch Mikr.-Anschluss an B. D. — 4° 43 = Weisse$_1$ $0^h.300$, von Herrn Wilterdink in Jan. 1892 annäherend bestimmt. Die geschätzte Grösse war 10.5.

177 Identificirt von Herrn Wilterdink am 16 Jan. 1892 durch Mikr.-Anschluss an B. D. + 18° 78, $9^m.5$. Das Object war schwächer als 10^e Grösse.

200 Zwei volständig beobachteten Bonner Meridianbestimmungen B. B. VI + 3°,86 geben den Ort für 1875.0 wie folgt:

	$8^m.0$	$0^h\,34^m\,24^s.08$	$+ 3°\,47'\,32''.2$	1861.97
	8 .5	24 .00	32 .9	1863.91
Albany	8 .2	23 .98	31 .6	1879.9

Albany-Lal. — $0^s.30$ — 4".5 (Albany A. G. C. p. 172), sodass die vermuthete E. B. nicht bestätigt wird.

223 Der Unterschied zwischen den Positionen A. N. **69** und **70** rührt von einem andern Coördinatensystem, dem Schönfeldschen, her, auf welches der Ort A. N. **70** bezogen ist.

272 Von Watson bestimmt während dessen Aufenthalt in China, für die Beobachtung des Venusvorübergangs. Der Ort des Vergleichsterns ist abgeleitet aus dem Unterschied Planet — ✻. Die Declination beruht auf 38 Cassiopeiae. Weisse 0^h807, B. Z. 29 giebt für 1875.0: $0^h\,47^m\,19^s.43 + 10°\,26'\,41''.1$, 9^m, sodass der starke Unterschied in A. R. mit Yarnall nicht aus E. B. erklärt werden kann.

279 Markree Cat. Vol. I, pag. 42 hat für 1875.0, $0^h\,47^m\,59^s.5 + 6°\,1'.6$, $10\frac{1}{2}^m$; also etwas weniger stark abweichend von A. N. als B. D.

283 Die A. R. soll statt $32^s.52$ heissen $13^s.85$, wie Dr. Peter mir brieflich mitgetheilt hat. Die Correctur ist nachher A. N. **134** S. 224 von Dr. P. publicirt.

298 A. R. in A. N. um $+ 10^s$ corrigirt. Diese Berichtigung wird bestätigt durch die entsprechende Helsingforser Beob. des Cometen II 1870 am 26 Sept. dieses Jahres, und durch die Position Berlin A. G. C. B. 293; $0^h\,50^m\,34^s.44 + 24°\,36'\,54''.4$, 1875.0.

306 E. B. $+ 0^s.018$ — 0".12 nach Porter Prop. Mot. Nr. 79.
$+ 0\,.0202$? „ Paris Cat. 1230
Lalande 1635 8-9^m hat für 1875.0: $0^h\,51^m\,11^s.16 + 29°\,38'\,40''.0$
Rümker 232 „ „ „ 12 .09 32 .6

Nr.

Hieraus geht hervor, dass Paris Cat.$_3$ 1230 in Declin. um $-20''$ zu corrigiren ist, wie auch Porter Cat. Prop. Mot. Stars p. 23, angenommen hat.

313-6 Deutet schwache E. B. an

326 Genäherter Ort durch Mikrom.-Anschluss an B.D. $+5°131 =$ Greenw. 9 Year Cat. Nr. 88 von Herrn Wilterdink am 16 Jan. 1892 bestimmt.

345 E. B. $+0^s.0325 + 0''.211$ nach Dr. Bischof's Inaug. Dissertation S. 16, Nr. 261.

353 Herr Prof. Holetschek theilt mir mit, „Stern im beleuchteten Felde schwierig zu beobachten."

357 Genäherter Ort durch Mikrom.-Anschluss an B. D. $+27°166$; $8^m.7 =$ Weisse$_2$ 1415 von Herrn Wilterdink am 16 Jan. 1892 bestimmt.

365-66 In keinem anderen Catalog. Da Kremsmünster und B. B. VI gut stimmen und die Berliner Mer. Beob. ebenso übereinstimmen, hat der Unterschied vielleicht seinen Grund in E. B.

396 Bei der Vergleichung dieses Sterns, sowie der Nummern 412 und 425, mit den Sternen A. N. 84 S. 43, daselbst mit den Nummern 49, 50 und 51 bezeichnet, fand ich diese drei ungefähr $10''$ südlicher. Der Stern Nr. 50 ist mikrom. bestimmt worden durch Anschluss an Weisse 0^h1082, daselbst Nr. 50^a genannt, während die Nummer 49 und 51 an Nr. 50 angeschlossen worden sind. Den Stern Weisse$_1$ 0^h1082 reducirte ich aus Bessels Zonen 109, 134, 139, 259 mit Luthers Hülfstafeln, und fand seinen Ort für 1873.0: $1^h2^m2^s.46 - 6°51'14''.3$, also in A. R. $0^s.06$ grösser, in δ $11''.6$ nördlicher als in A. N. 84 S. 43. Hiernach habe ich die Nummern 49, 50 und 51 um $+0^s.06$ und $+11''.6$ corrigirt.

401 Nach brieflicher Mittheilung von Dr. Peter ist statt eines Fixsterns der Planet Irene beobachtet. Deswegen ist die Position in den A. N. der scheinbare Ort dieses Planeten für 29 September 1869: $1^h2^m30^s.97 - 7°43'21''.7$, Culminationszeit Leipzig.

422 Die A. R. ist um $+2^s$ corrigirt, wie Bessel's Zone und Berlin A. G. C. B. verlangen.

441 Die Declin. ist nach Albany A. G. C. um $2'$ südlicher und da ich den Stern nirgends verzeichnet fand, hat Dr. E. F. v. d. S. Bakhuyzen eine Meridianbeob. angestellt, welche die Richtigkeit der Albany Declin. bestätigt. Es ergab sich aus der Leidener Mer.-Beob. für 1875.0: $1^h9^m40^s.62 + 1°36'16''.3$ Ep. 1893.7.

445 Kam 264 ist von Rümker (A. N. 38, 62) bestimmt; kein Reductionsfehler liegt vor bei der Uebertragung auf das Aequin. 1855.0.

511 Herr Wilterdink hat keinen Stern finden können, der dem Ort von den A.N. entspricht. Wohl beobachtete er zwei Sterne nämlich 1875.0: $1^h20^m51^s.4 + 10°40'.7$ und $1^h20^m42^s.6 + 10°33'.2$. Ersterer is identisch mit Nr. 505. Als ich Dr. J. Palisa hierüber um Aufschluss ersuchte, theilte er mir mit, dass die Originalbeobachtung $+1^m$ Correctur verlangte. Herr A. Pannekoek hat an der von Palisa verbesserten Stelle ebenso wenig ein Object erblicken können, das mit dem corrigirten Ort in den A.N. stimmt. Eine Berichtigung von $-5'$ in der Declin. führt auf den in der Col. Quelle angegebenen Stern aus Markree Cat. Jedenfalls ist der Ort nicht zu trauen.

Nr.

521 Der Unterschied mit Arg.-Weiss ist wohl bei Argelander zu suchen, da nach Mittheilung von Dr. Palisa in seinen 3 Bestimmungen kein Fehler zu entdecken war. Cincinnati Zones Nr. 199 giebt für 1875.0: $1^h 23^m 59^s.14 - 20° 14' 42''.1$, also mit Palisa stimmend. Die Reduction aus der Zone auf 1850.0 ist richtig.

526 Die Bestimmung in Kremsmünster weicht in beiden Coordinaten stark von Nr. 527 ab, dessen Ort mit den angeführten Quellen leidlich stimmt; Weisse-Bessel scheint in A.R. 1^s zu gross zu sein.

537 Kein Stern, wohl der Nebel war nach Herrn Wilterdinks Untersuchung mit dem Leidener 6 Zöller zu erblicken. Auf meiner Bitte hat Dr. Peter in den Beobachtungsjournalen die Engelmann'schen Beobachtungen nachgesucht, und mir brieflich das Resultat mitgetheilt das er auch nachher A.N. 134 S. 227 publicirt hat, wohin ich mir erlaube zu verweisen.

557-8 Kremsmünster weicht stark von Pola ab. Zur Entscheidung dieser Abweichung hat. Dr. E. F. v. d. S. Bakhuyzen den Stern Nov. 1893 im Meridian bestimmt, woraus die Richtigkeit von Palisa's Beob. hervorgeht. Palisa theilte mir um dieselbe Zeit mit, dass die Kremsmünster Bestimmung auch in Strasser's kleinen Catalog von 750 Sternen für 1870.0 Nr. 54 vorkommt. Nach dieser Quelle ist der Ort für 1875.0: $1^h 31^m 24^s.35 - 8° 22' 17''6$; Grösse 9—10. Dr. Palisa glaubt dass die Declin. der Correctur $+ 26''.0$ bedürft, und dadurch würde die Uebereinstimmung befriedigend werden.

588 Argelander's Declin. ist nach dem Catalog von Weiss um $+1'$ verbessert. Der Einfluss auf die Refraction beträgt $+ 0''.2$, welche ich in Rechnung gezogen habe.

591 Die Correctur ist mir von Dr. Peter brieflich mitgetheilt.

604 Nach mehreren vergeblichen Versuchen ist es Herrn Pannekoek gelungen dieses äusserst schwache Object, das zur Zeit statt Niobe beobachtet ist, aufzufinden, und an B.D. $+ 45° 449$ ✻ — B.D. gleich -19^s und $-8'$, mikrometrisch anzuschliessen.

632 Die Correctur wird durch die Berliner Beob. in Nr. 633 und durch die angeführten Quellen hinreichend constatirt.

649-50 Die Beobachtung aus Kremsmünster findet sich auch in Strasser's Liste Nr. 64 und giebt für 1875.0: $1^h 47^m 1^s.25 - 15° 2' 43''.1$, 9^m. Die Declin. ist etwa $2'$ nördlicher als in den A.N. Wird für die Declin. nach A.N. angenommen, dass die Epoche der Beob. 1 Jahr irrig ist (statt 1873, 1872), so würde die Declin. um $17''.9$ nördlicher und also $- 15° 4' 36''.9$ werden, wodurch die Uebereinstimmung mit Pola und Argelander leidlich wird.

661 Obgleich der Ort des Tempelschen Cometen II 1873 in Kremsmünster stimmt mit der fast gleichzeitig angestellten Beobachtung in Wien (A.N. 83 S. 183), (die Beob. Momenten sind nur eine halbe Minute verschieden, Wien später, stündliche Bewegung des Cometen $+ 1^s.9 - 36''$, woraus hervorgeht Wien-Kremsmünster $- 0^s.51 + 12''.7$), hat Herr Pannekoek keinen Stern finden können, welcher den Ort des Vergleichsterns, abgeleitet aus der Differenz Comet-Stern, entspricht. Der nächst passende Stern obgleich schwach (11^m) steht für 1875.0 nach Pannekoek's Angaben auf $1^h 48^m 14^s 98$ $- 12° 29' 39''$, also in A.R. gut aber in Declin. $4'$ nördlicher als in A.N. Der Ort ist also noch keineswegen identificirt, und (es sei dass der Stern variabel ist) wenig zuverlässig.

746 Vergebens versucht den Unterschied von $10''$ zwischen Berlin und Mikrometer-Anschluss in Wien zu erklären. Der in Wien benutzte Vergleichstern, Weisse$_1$ 1014, B.Z. 44 und die Position sind richtig auf 1874.0 reducirt.

Nr.

760 Dr. Knorre glaubt dass ein Versehen in der Epoche in der Reduction der Declin. auf 1880.0 in Kremsmünster denkbar sei. Nachher hat Dr. Battermann den Stern 3 Mal am Berliner Meridiankreis bestimmt. Diese Bestimmung, Epoche 1893.9, unter 759, „Secunden der Quelle" mitgetheilt, berechtigt die Kremsmünster Declin. um + 17″.1, den Betrág der Praecession, zu corrigiren.

773 E.B. + 0ˢ.0128 — 0″.231 nach Stumpe A.N. 125 S. 398
„ 0 .0130 — 0 .235 „ M_2 532
„ 0 .013 — 0 .23 „ Porter Prop. Mot. 160
„ 0 .0148 — 0 .240 „ Paris Cat. 2820

786 Die A.R. der A.N. 107 ist an Weisse's Catalog entlehnt.

806 A.R. in A.N. um + 30ˢ corrigirt, wie aus der entsprechenden Washingtoner Beob. des Planeten Leda 1868 Oct. 12 (A.N. 74 S. 71) und B.B. VI 392 hervorgeht.

807 Die Declin. von Weisse und Bessel ist 11″ südlicher als in den A.N. Nach brieflicher Mittheilung von Dr. Knorre ist der sequens eines Doppelsterns in Berlin bestimmt. Der praec. ist dan wohl Weisse_1 236, welcher diesem Stern 2ˢ.67 und 7″.3 südlich vorangeht.

824 Mikrometer-Anschluss an B.D. + 15°331 = Paris Cat. 2930.

826 Markree Cat. Vol. II S. 127 hat einen Stern 1875.0, 2ʰ21ᵐ19ˢ.5 + 13°54′.8 also 10′ nördlicher; der von Palisa beobachtete Stern fehlt jedoch in Markree Cat. Auf der von Paul und Prosper Henry bearbeiteten Pariser Karte Nr. 8 findet man beide Sterne.

859 Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A.G.C.B. 709 : 2ʰ29ᵐ51ˢ.23+17°23′8″.3

868 Die Pariser Karte Nr. 8 giebt die auf 1875.0 reducirte Position 2ʰ34ᵐ12ˢ + 14°46′.5.

871 Nach brieflicher Mittheilung des Herrn Wilterdink war die Leidener Decl. um — 10″ zu corrigiren.

881 Die von Romberg angeführte Correction ist durch briefliche Mittheilung von Dr. J. Palisa bestätigt.

899 Nach brieflicher Mittheilung von Dr. Knorre war die Declin. um + 19″.3 zu verbessern.

905 Die genäherte R.A. um — 10ˢ corrigirt, wie durch die Berliner und Hamburger Beobachtungen des Cometen I 1871 am 10 April 1871 (A.N. 77 S. 287 u. 253) erfordert wird. Bestätigt durch Lalande und Cambridge (M.) A.G.C.

909 Nach brieflicher Mittheilung von Dr. Knorre ist A.R. um 1ˢ.47 corrigirt.

913 Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A.G.C.B. 764 : 2ʰ42ᵐ46ˢ.43+19°9′17″.3 E.B. + 0ˢ.005 — 0″.03; hiernach ist Weisse und Bessel um + 1ˢ zu corrigiren.

914 Mikrometer-Anschluss an B.D. + 65°304 = Christiania A.G.C. 505.

926 Mikrometer-Anschluss an B.D. + 9°361 = Weisse_2 657.

933 Nach brieflicher Mittheilung von Dr. Knorre die Declin. der A.N. um + 11″.3 verbessert. Die Zahl der Beobachtungen soll nach dieser Mittheilung 2 statt 1 sein. Der Ort von 932 aus Berlin brieflich an Dr. Palisa mitgetheilt wird nun wohl identisch mit 933 sein.

936 Die Decl. in A.N. um + 1′ verbessert, wie auch Yarnall 1280, 2ʰ45ᵐ49ˢ.60 + 37°49′35″.3 verlangt.

Nr.

940 Die Correction der A.N. in Decl. um —1′ wird von Göttingen Cat. I 757-8 und M_1 1009 erfordert.

943 Mikrometer-Anschluss an B.D. + 9°361 = Weisse$_2$ 657.

945 Mikrometer-Anschluss an B.D. +16°361

950 Die Decl. der A.N. um +1′ corrigirt nach Pulk. Cat., Yarnall und Lund. A.G.Z.

951 Die Polaer Declin in den A.N. ist etwa 23″ nördlicher als die Mikrom.-Beob. A.N. 95, 187. Dr. Palisa hat in Juni 1894 während seinem zeitlichen Aufenthalt in Pola, den Stern dort am Meridiankreise neu bestimmt und mir als Resultat mitgetheilt: $2^h\,50^m\,39^s.82 + 69°\,37'\,22''.5$, mit der Bemerkung dass bei der A.R.-Bestimmung wahrscheinlich ein Verzählen der Secunden statt gefunden hat. Um dieses zu entscheiden hat Dr. E. Bakhuyzen in Nov. 1894 die A.R. am Meridiankreise auf's Neue bestimmt, und gefunden: 1875.0, $2^h50^m40^s.71$. Deswegen habe ich die neuen Polaer A.R. um $+1^s$ corrigirt.

957 Die einzelnen Oerter aus den Berliner Zonen sind folgende:

$5^m.5$	$2^h\,52^m\,4^s.02$	$+\,20°\,50'\,20''.4$
5 .5	4 .03	20 .0
7	3 .96	20 .1
7	4 .01	19 .65
6 .5	3 .97	19 .9

958 Dieser Stern, obgleich 8er Grösse, habe ich bloss in B.D. verzeichnet gefunden.

961 Die Correctur —10″ ist durch die verglichenen Quellen hinreichend constatirt.

969 Durch Anschluss an B.D. +17°471 = Paris Cat. 3649 in Pulkowa mikrometrisch bestimmt.

983 A.N. weicht von 3 gut stimmenden Christianiaer Beob. ab. Ich fand den Stern in den Washington Observations for 1882 in dem Catalogue of miscellaneous Stars Nr. 49: 1882.0, $2^h\,56^m\,20^s.82$ $+\,66°\,56'\,58''.3$ (3 obs.); da dieser Ort mit Christiania in Einklang ist, habe ich ihn im Catalog angesetzt.

987 A.N. bedürft der Correctur —2^m, überdiess ist in den A.N. für δ Persei, ϱ Persei zu lesen, während in B.B. VI S. 203 die Zufüging Var. ϱ Persei, nicht +38°637, sondern +38°630 angehört.

999 Vermuthlich ist diese Bestimmung schon in den 3 Beob. der Nummer 998 aufgenommen.

1018 Wahrscheinlich ist diese Bestimmung in der von Nr. 1019 begriffen.

1020 Auch für diesen Stern gilt dieselbe Bemerkung.

1035 In B.D. ist der Buchstaben B zu streichen, da ich den Stern in B.B. VI vergebens gesucht habe.

1038 Durch Anschluss an B.D. +17°506 in Pulkowa mikrometrisch annäherend bestimmt.

1041 Romberg's Annahme, die Position in den A.N. gelte für den vorangehenden von zwei gleich hellen Sternen auf demselben Parallel, wird bestätigt durch M_2 644: 1875.0, $3^h\,4^m\,19^s.01 - 3°\,21'\,36''.2$, $10^m.0$, welcher dem folgenden Stern entspricht.

1048 Durch Anschluss an B.D. — 3°514 in Pulkowa annäherend mikrometrisch bestimmt.

1052 Durch Anschluss an B.D. —14°630 in Pulkowa annäherend mikrometrisch bestimmt.

Nr.

1059 Die Grössenschätzungen in Berliner A.G.C.B. sind 7.7, 7.3, 8.2, 8.0 und 8.0.

1077 Nach brieflicher Mittheilung von Dr. Knorre ist die Declin. in den A. N. um $+10''$ verbessert.

1079 Obgleich Dr. Knorre in den Originalen keinen Fehler hat entdecken können, existirt der Stern A.N. 81, 69 Nr. 76 nicht am Himmel, wie Romberg in den Noten zum Verz. genäherter Oerter schon angeführt had. Diese Mittheilung ist durch eine Meridian Beob. von Dr. E. F. v. d. S. Bakhuyzen in Nov. 1894 völlig bestätigt. Deswegen habe ich den Ort in A. N. 81 nicht in den Catalog aufgenommen. Der Stern 1079 ist A. N. 81 S. 69 Nr. 77.

1082 Die Correctur wird bestätigt durch M_2 670: $9^m.4$, 1875.0, $3^h16^m5^s.92 + 0°17'29''.6$.

1085 Nach brieflicher Mittheilung von Dr. Knorre ist kein Fehler in der publicirten Position vorhanden.

1086 E. B. nach Stumpe A. N. 125 S. 399 $0^s.0000$, $-0''.250$.

1096 E. B. nach Bonn A. G. C. $+0^s.0003$ $-0''.034$.

1101 Struve Pos. med. 342 praec. $3^h20^m49^s.34 + 20°1'38''.3$; also keine Spur von E. B. Dieser Stern kommt in Berlin A. G. C. A. nicht vor.

1118 Vielleicht ist diese Bestimmung schon in der vorangehenden Nummer begriffen.

1129 Durch Anschluss an B. D. $-5°696$ = Paris Cat. 4253 in Pulkowa annäherend mikrom. bestimmt.

1136 Vielleicht ist diese Bestimmung schon in Nr. 1135 aufgenommen.

1139 Wegen der starken Abweichung zwischen der A.R. nach A.N. und Glasgow I, habe ich auch Weisse, 610, B.Z. 133, mit Rücksicht auf die von Argelander, Fehlerverz. B.B. IV, S. VIII angegebene Berichtigung in A.R., um -15^s verbessert, und Glasgow II 309 auf 1875.0 reducirt.

Es ergiebt sich	$3^h33^m34^s.98$	$+12°41'$ $3''.1$	Epoche	1822.99	
	34 .81	40 55 .9	„	49.7	
	35 .46	....	„	70.9	
	35 .45	41 5 .4	„	72.40	72.62
	36 .09	5 .4	„	88.93	88.09

Wenn man Kam 647, entnommen aus A. N. 30, 99 Hamburg Rümker, ausser Acht lässt, ist E.B. in A. R. vorhanden.

1157 E. B. nach Paris Cat. $-0^s.0108$, $0''.00$, nach Cambr. (M.) A. G. C. $-0^s.0086$, $-0''.043$. Diese E. B. kann die starke Abweichung der Berl. Beob. in A. N. nicht erklären.

1158 Zwei Beob. in Berlin A.G.C.B. geben die Declin. um 1′ südlicher, deswegen A.N. um diesem Werth corrigirt.

1162 Nach brieflicher Mittheilung von Dr. Knorre ist die Declin in A.N. um $+45''.9$ corrigirt; die Praecession war mit dem falschen Zeichen angebracht.

1165 E. B. $-0^s.0013$, $-0''.039$ nach Pulkowa Cat. (Bradley 522).

1181 Cambridge (Engl.) A. G. C. $3^h44^m37^s.94$, $25°51'23''.1$ Epoche 1886.4 (3 Beob.).

1186 Weitere Angaben über E. B.

$-0^s.0420$	$+0''.167$	Argelander 250 Sterne Nr. 47.
-0.043	$+0.190$	Bischof Nr. 47.
-0.0421	$+0.190$	Stumpe A.N. 125, S. 400.
-0.041	$+0.15$	Porter Prop. Mot. Nr. 257.

Nr.

1202 Die Epoche der Declin. ist 1868.0 statt 1867.0, deswegen um den Betrag der Praecession —10″.7 corrigirt.

1215 Herr Dr. Romberg hat in Sept. 1894 die Originalen in Berlin nachgesehen, und hat die Position 0ˢ.04 grösser und 5″.5 nördlicher gefunden als in A.N.

1217 Von Herrn Pannekoek in Sept. 1894 durch Anschluss an Nr. 1219 dieses Catalogs bestimmt.

1219 Gleichzeitig mit Nr. 1217 untersuchte Herr Pannekoek den Ort dieses Sterns durch Anschluss an B.D. + 50°, 874 = A.Oe. 4334-5 und fand A.N. richtig, sodass die A.R. von B.D. + 50°, 886 5 zu klein ist.

1233-5 Die Declin. um — 10″ corrigirt und dann wohl identisch mit 1234. Engelmann vermuthtet E.B., welche jedoch nicht bestätigt wird durch die angeführten Quellen und verschwindet wenn Lalande, welche nur an einem Faden beobachtet ist, um + 1ˢ corrigirt wird. Im Pariser Cat. kommt der Stern nicht vor.

1240 Schjellerup ist um — 5′ zu corrigiren, wie auch B.D. verlangt.

1241 Weisse ist + 6ˢ zu corrigiren. Bessel's Zone ist richtig.

1243 Nach Romberg's Bemerkung (Publ. XVIII der A.G.) war an dieser Stelle kein Stern zu sehen. Dr. Peter hat keinen Reductionsfehler finden können, glaubt jedoch dass ein grober Versehen in der Kreisablesung vorliegt. Der Stern ist irrthümlich an Stelle von Nr. 8 (cf. die Liste A.N. **81**, 365), beobachtet worden. Jedenfalls ist die Position wenig zuverlässig. Dr. Peter fand in Engelmann's Beob.buch notirt „falscher Stern".

1244 Nach Dr. Peter's Mittheilung ist statt 1872.0: 3ʰ57ᵐ29ˢ.825 + 20°30′19″.6 zu lesen 3ʰ57ᵐ26ˢ.87 + 20°30′19″.7. Fehler in der Reduction auf den Jahresanfang.

1259 Romberg's Conjectur, die Berliner Beobachtung sei um — 10ˢ zu corrigiren, wird bestätigt durch W_2 1281-82, Rümker und eine briefliche Mittheilung von Dr. Knorre.

1263 Die Leipziger Position in den A.N. weicht in Declination mehrere Minuten ab von den Positionen der Sterne B.D. + 30°, 619 und $Weisse_2$ 1272, welche in α am nächsten liegen. Dr. Peter berichtet auch dass der Stern, obgleich 4 Mal in α und 3 Mal in δ beobachtet, in den Tagebüchern nicht zu finden war. Eine Correction von +1ᵐ in α bringt jedoch die Leipziger Position vollkommen in Einklang mit der Position in den Leidener A.G.Z. Deshalb ist diese Correction angebracht.

1268 Nach brieflicher Mittheilung von Dr. Knorre war bei der Reduction auf 1865.0 die Praecession mit falschem Zeichen angebracht. Die Position ist nun identisch mit 1267, und diese als eine der 3 Beobachtungen von Nr. 1268 zu betrachten.

1282 Die Declination von A.N. weicht 18″ ab vom Pariser $Cat._2$ und Bonn A.G.C. Unter Annahme dass die Praecession für 1865 mit falschem Zeichen angebracht ist, ist die Declination um + 19″.2 corrigirt.

1291 E.B. in Declination nach Cambridge (M.) A.G.C. + 0″.107.

1300 E.B. in A.R. nach Cambridge (M.) A.G.C. —0ˢ.010.

1312 Durch Mikrometer-Anschluss an B.D. + 25°, 707 = χ Tauri.

1319-20 Der Stern ist Yarnall 1928 (B.A.C. 1351) als 6ᵐ.5 angegeben. B.D. + 16°, 587 hat 8ᵐ.0, Kam 765 und $Weisse_2$ 317 9ᵐ.0. In Chandler's Cat. of variable stars (1888) kommt der Stern nicht vor.

1332 E.B. nach Porter Cat. Prop. Motions Nr. 282 + 0ˢ.009 — 0″.34, nach Stumpe A.N. **125**, S. 400 +0ˢ.0073 —0″.327, nach $Paris\ Cat._3$ +0ˢ.0099 —0″.340, nach A.N. **110**, S. 197 +0ˢ.0096 —0″.337.

1344 Die Correction von + 1ᵐ von Romberg am Pulkowaer Meridiankreise bestätigt, und nachher mitgetheilt A.N. **114**, S. 354.

Nr.

1348 Mikrometer-Anschluss an B. D. —5°, 948 = Paris Cat.$_3$ 5229.

1354 Die starke Abweichung in Declination zwischen Lalande und A.N. hat grösstentheils ihren Grund in E.B. Nach brieflicher Mittheilung von Geheimrath Auwers betragt diese +0^s.0015 —0″.099, und ist die Position des Berliner A.G.C.A. Nr. 1226: 47^s.63, 5″.8 Epoche 1870.7.

1355 Die an B.D. +16°, 627 hinzugefügte Buchstabe B, bezieht sich auf B.D. 626.

1359 Nach einer Bemerkung von Prof. Kapteyn ist dieser Stern vielleicht duplex.

1366 Die A.R. von Weisse ist ungefähr 1^s kleiner als A.N. Im Leipziger A.G.C. findet man 34^s.29, 44″.3 Epoche 1869.60 und 34^s.64 41″.6 Epoche 1890.02.

1373 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen ist A.R. in A.N. um +2^s corrigirt.

1380 Nach Romberg Publ. XVIII der A.G. ist die A.R. der A.N. um —2^m corrigirt. Diese Correction wird bestätigt durch die Königsberger Beob. des Brorsen'schen Cometen 27 April 1867 A.N. 74 S. 243 und durch Leiden A.G.Z.

1382 Nach brieflicher Mittheilung von Prof. Graham giebt Cambridge (E.) A.G.C.: 24^s.18, 11″.4 Epoche 1881.3.

1389 In Albany sind am Meridiankreise die Grössen 8.3, 8.8 und 8.2, am Equatorial die Grössen 8.7, 8.2 und 8.3 beobachtet.

1395 Die A.R. von B.D. +22°, 751 ist 5^s kleiner als die A.R. von A.N. Nach brieflicher Mittheilung hat Dr. Palisa sich durch Anschluss von der Richtigheit der Polaer Position überzeugt.

1399 Nach Mittheilung von Geheimrath Auwers giebt Berlin A.G.C.A. Nr. 1302: 20^s.91, 2′ 0″.7.

1400 Die Grösse nach B.D. ist ziemlich abweichend von den anderen Quellen. B.D. 6.5, A.N. (8^m), Yarnall 8.0, Weisse$_2$ 866, B.Z. 398, 8. Die Position nach Weisse ist 28^s.80, 53″.2.

1401 In Washington Observations 1880, S. 176 Nr. 205 findet man: 28^s.90, 59″.2 Epoche 1881.0; Lalande 8947 giebt: 28^s.66, 1′11″.6; Bonn A.G.C. stimmt jedoch gut mit Washington, sodass Paris Cat.$_3$ 5477 vermuthlich um +10″ zu corrigiren ist.

1406 Nach Mittheilung von Geheimrath Auwers hat Berlin A.G.C.A. 1321: 59^s.71, 29″.1.

1410 Die Uebereinstimmung von A.N. mit B.D. 35°, 913 ist schlecht, jedoch ist die Richtigheit der Leidener Meridian-Bestimmung gewährt durch die gute Uebereinstimmung der Beobachtungen des Brorsen'schen Cometen in Leiden und Athen 29 April 1868, obwohl verschiedene Vergleichsterne benutzt sind. Der Stern (9.5) kommt in den A.G.Z. von Leiden und Lund nicht vor.

1411 Herr Wilterdink fand in den Tagebüchern in Leiden die A.R. 1^m zu gross. Mikrometer-Anschluss in Pulkowa an B.D. +29°, 760.

1443 Durch Mikrometer-Anschluss an B.D. +16°, 669 = Weisse$_2$ 1056 in Leiden wurde die A.R. 4^s.08 gefunden. B.B. VI 669 ist also um +1^s zu corrigiren.

1449 Die Decl. in Leiden A.G.Z. 400 ist 48″.9 und in Zone 402 43″.4; die zweite Beobachtung scheint die richtige zu sein. Eine nachträgliche Beobachtung giebt 43″.6.

1455 Nach Mittheilung von Prof. Bruns giebt die Leipziger A.G.Z.: 23^s.39, 35″.1, 9^m.0.

1456 Mikrometer-Anschluss an B.D. —0°, 811 = Göttingen Cat. I 1399-1400.

Nr.

1458 Diese Bestimmung ist vielleicht schon in der vorangehenden Nummer aufgenommen.

1466 Die zweite Annahme von Romberg Publ. XVIII der A.G., die A.R. des Sterns in A.N. sei um $+1^m$ zu corrigiren, scheint die richtige zu sein, indem der Stern dann mit Cambridge (M.) A.G.C. 2054 ziemlich befriedigend in Decl. stimmt und in A.R. etwa $0^s.6$ abweicht. A.N. ist also um $+1^m$ corrigirt. Die erste Annahme von Romberg, die Declination sei 10′ fehlerhaft, giebt keine Uebereinstimmung mit einer der Positionen in Cambridge (M.) A.G. Catalog.

1468 Nach Mittheilung von Director E. Becker ist die genäherte reducirte Position aus den Strassbürger südlichen Zonen für 1875.0: $4^h54^m0^s.9$, $-3°54'21''$. Die Declination bei Bessel ist also ungefähr 10″ zu nördlich.

1474 Die Correction von $+1'$ in Declination wird bestätigt durch Pulkowa Catalog 1875.0, 1139: $4^h55^m56^s.42$ $+1°51'55''.2$; $8^m.3$.

1488 Weisse_1 1275 positio emendata pag. 250 giebt: $3^s.09$, 51.″0.

1489 Romberg's Correction Publ. XVIII der A.G. wird durch Helsingfors A.G.C. bestätigt.

1498 Die Correction von $-1^s.33$ findet sich in Romberg Publ. XVIII A.G. und A.N. 114 S. 354.

1541 In Leiden ist Dec. 1894 B.D. $+17°,893$ angeschlossen an den gut bestimmten Stern B.D. $+17°,886$ und die Correction von B.D. 893 gleich -3^s und $-3'.1$ gefunden. B.D. 893 stimmt dann mit der Leidener Position dieses Sterns.

1543 E.B. nach Paris Cat._3 6090: $0^s.0000$, $-0''.077$.

1558 Nach brieflicher Mittheilung von Geheimrath Auwers ist die Position aus den Berliner A.G.C.A. $5^h20^m7.40 + 17°9'37''.6$. Epoche 1870.1.

1571 Nach brieflicher Mittheilung ist nach Leipzig A.G.C. A.R. $59^s.22$, Decl. 54″.6.

1574 Nach Mittheilung aus Bonn soll die Grösse der B.D. statt 9.5, 6.7 sein.

1576 Nach A.N. 78 S. 167 ist die Declination A.N. 74 S. 75 um $+1''$ corrigirt.

1590 Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A.G.C.B. Nr. 1608: $5^h30^m15^s.78$ $+15°38'51''.9$. Epoche 1870.7.

1619 Die Correction wird durch andere Beobachtungen des Cometen 1881b am 26 Juni 1881 bestätigt. Nach Krüger ist E.B. $-0^s.003$ $-0''.012$.

1620 In Harvard Zones Vol. I S. 159 findet sich die Bemerkung: „Fine nebulosity surrounding the stars Nr. 160 and 161". Die Position von 161 ist A.R. $5^h40^m22^s.00 + 0°1'25''.6$; 11^m.

1649 Mikrometer-Anschluss in Pulkowa an B.D. $+31°$, 1154 = Weisse_2 1625.

1666 Die Correction von -1^s folgt aus Helsingfors A.G.C. und Arg.-Oeltzen; auf 1875.0 reducirt ist Arg.-Oeltzen 6432 A.R. $5^h54^m41^s.59$, Decl. $63°27'19''.3$; $6^m.7$.

1668 Nach Mittheilung von Director Graham giebt Cambr. (E.) A.G.Z. $7^s.23$ und 1″.4.

1676 Nach brieflicher Mittheilung von Prof. E. Becker ist die Decl. um $+14''.0$ corrigirt.

Nr.

1705 Nach Mittheilung von Dr. Knorre soll die Epoche in A.N. 1869.0 statt 1870.0 sein. Die Position stimmt dann mitt 10 Y. Cat. und Paris Cat.$_3$

1707 In Leiden Jan. 1893 durch Anschluss an B.D. $+6°$ 1150 annähernd mikrometrisch bestimmt.

1715 An die A.R. der A.N. ist eine Correction van -1^m angebracht, welche sowohl aus der Leidener Meridianbeobachtung als aus den Beobachtungen von Comet 1881 III, wobei dieser Stern als Vergleichstern benutzt ist, hervorgeht. Der Stern ist A.N. **102** als 8^{er}, A.N. **103** als 9^{er} Grösse geschätzt. Bei der Beobachtung in Leiden in unterer Culmination, als die Abenddämmerung noch nicht vollständig zu Ende war, ist der Stern von E. F. v. d. S. Bakhuyzen als 9^{er} Grösse geschätzt. Der Stern fehlt in B.D. und in Christiania A.G.C.

1718 Herr Dr. Romberg hat nicht nur die Details der publicirten Beobachtungen der Vergleichsterne für Comet 1881 IV brieflich mitgetheilt, sondern auch die nicht publicirten Oerter der Vergleichsterne dieses Cometen übersandt, damit diese auch in den Catalog mit aufgenommen werden könnten. Sie sind in der Col. Band und Seite der Astron. Nachr. durch [**108** 183] zwischen Klammern angedeutet.

1720 Siehe Bemerkung zu 1718.

1736 Die Correction -1^m von Romberg wird bestätigt durch die Hamburger Position A.N. **120** S. 83. Die A.R. und Decl. für 1875.0 in dem Catalog sind aus dieser letzten Position abgeleitet.

1743 Nach Mittheilung von Dr. Romberg ist die Correction der Decl. A.N. **108** S. 183 $+10''$ und nicht, wie die Berichtigung A.N. **108** S. 438 unrichtig angiebt $-10''$. Durch diese Correction des Vergleichsterns bekommt man auch eine besser übereinstimmende Declination des Cometen 1881 IV.

1766 Die durch Romberg angezeigte Correction von $+1^m$ folgt auch aus den Leidener Beobachtungsbüchern.

1769 Dr. Knorre theilte brieflich mit, dass A.R. vielleicht um -1^m zu corrigiren sei. A.N. stimmt jedoch mit B.D., und 1^m früher ist kein passender Stern in B.D. zu finden. Die Vergleichung am Himmel mit dem Leidener Refractor hat auch keinen Stern finden lassen, dessen A.R. 1^m kleiner als A.N. ist. Die A.R der A.N. ist also beibehalten.

1792 Die Leidener Position beruht auf nur einer Beobachtung.

1795 B.D. $+22°$, 1367 trägt den Buchstaben B, ist jedoch in B.B. VI nicht zu finden.

1808 Lalande 12546, 6^m hat fur 1875.0: $6^h 26^m 29^s.95 + 14° 15' 4''.4$.

1814 Mikrometer-Anschluss an B.D. $+70°$, 412 1892 Mai 9.

1823 Mikrometer-Anschluss an B.D. $+54°$, 1056 1892 Mai 10.

1827 Mikrometer-Anschluss an B.D. $+37°$, 1547 = Lund A.G.Z. 139 u. 148 1892 Mai 10.

1828 Mikrometer-Anschluss an B.D. $+70°$, 412 1892 Mai 9.

1833 Mikrometer-Anschluss an B.D. $+60°$, 980 = Helsingfors A.G.C. 4587 1892 Mai 10.

1837 E.B. $-0^s.003$ und $-0''.02$ nach Berlin A.G.C.B.

1838 Die A.R. von A.N. **69** um $3^s.45$ (den Betrag der jährliche Praec.) vergrössert, wie folgt aus Vergleichung mit A.N. **67**, B.D. 1263 und B.B. VI 15°, 1263.

Nr.

1844 Die A.R. der A.N. ist um 6^s corrigirt, da im Leidener Refractor, Januar 1893, kein Stern an dem angegebenen Ort anwesend war; und durch diese Correction Uebereinstimmung mit Bessel und Berlin A.G.C.B. erhalten wird.

1850 Mikrometer-Anschluss an B.D. $+63°$, 656 = Helsingfors A.G.C. 4641, 1892 Mai 10.

1853 Die übereinstimmende Werthe der A.R. nach Weisse und Lund A.G.Z. machen die Correction der A.N. von 1^s sehr wahrscheinlich.

1871 Mikrometer-Anschluss an 43 Camelopardali (Auwers Fund. Cat.) 1892 Mai 10.

1872 Die Position, der Madras Observations für 1885.0 Nr. 14 entnommen, ist für 1875.0: $6^h41^m25^s.53$ $+28°40'46''.1$, also nahe stimmend mit A.N.; Cambridge (E.) A.G.Z. giebt nach brieflicher Mittheilung: $6^h41^m25^s.68 + 28°40'46''.7$ Epoche 1876.5. Die Declination aus B.B. VI ist deshalb um $+10''$ zu corrigiren.

1885-86 Der Stern in keinem anderen Cataloge zu finden. Durch die Beobachtung an zwei Sternwarten scheint die Richtigheit der Position doch gesichert.

1887 Nach Palisa ist die Grösse 10, nach Cordoba Cat. 6.6, nach Stone Cape Catalogue 3236 6.7, nach Cordoba Z.C. VI^h 2247 7, Yarnall 2836 6.8. Der Stern fehlt in Arg.-Oeltzen, in Melbourne Cat. und in Washington Zones; dagegen findet man ihn bei Lacaille 2473.

1899 $Weisse_2$ 1383, B.Z. 517 giebt: $6^h47^m13^s.77 + 31°5'7''.8$, $9^m_,$, also in Uebereinstimmung mit Leiden A.G.Z. Die Correction der Declination von A.N. von 2′ scheint also verbürgt.

1932 Mikrometer-Anschluss an B.D. $+31°$, 1487 = $Weisse_2$ 1703, 1892 Mai 10.

1946 Mikrometer-Anschluss an B.D. $+19°$, 1629 = Paris $Cat._2$ 8740, 1892 Mai 12.

1948 Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A.G.C.A. 2643: $57^s.78$, $41''.6$ Epoche 70.8 und E.B. $-0^s.012$ $-0''.30$, wodurch der Unterschied zwischen A.N. und B.B. VI Epoche 1861.2 erklärt wird.

1951 E.B. nach Porter Cat. prop. motions 413: $-0^s.011$ $-0''.50$; nach Frisby A.N. 108 S. 278: $-0^s.011$ $-0''.52$; nach Stumpe A.N. 125 S. 402: $-0^s.0123$ $-0''.511$; nach Paris Cat. S. [34]: $-0^s.0095$ $-0''.514$.

1957 Romberg's Bemerkung in Publ. XVIII A.G., die Position dieses Sterns sei verdächtig, scheint nach der Uebereinstimmung mit Kasan A.G.C. nicht richtig.

1962 Mikrometer-Anschluss an B.D. $+28°$, 1333, 1892 Mai 19.

1971 E.B. nach Berlin A.G.C.B. $+0^s.0027$ $-0''.105$.

1974 Die A.R. von B.D. $+39°$, 1905 ist $10^s.6$ grösser, die Decl. 1′ kleiner als A.N. Die Position der A.N. scheint jedoch richtig zu sein, 1°. da in Leiden durch Mikrometer-Anschluss an B.D. 1905 ein Stern $10^m.5$ bestimmt ist, der ziemlich gut mit A.N. stimmt, 2°. da am 29 Dec. 1877 in Pola zwei Beobachtungen des Planeten Eva erhalten sind, die gut stimmen, die erste durch Anschluss an 1968 dieses Catalogs, die zweite durch Anschluss an 1974.

1978 Nach brieflicher Mittheilung von Geheimrath Auwers ist die Position von Berlin A.G.C.A. 2727 $40^s.24$, $41''.9$, Ep. 1870.7, E.B. $+0^s.002$ $-0''.12$, wodurch der Unterschied zwischen A.N. und Bessel erklärt wird.

Nr.

2000 Mikrometer-Anschluss an B. D. + 32°, 1527.

2004 Die A. R. in A. N. 78 durch Mikrometer-Anschluss an Arg.-Oeltzen 8629 = Helsingfors A.G.C. 5068: $7^h14^m27^s.05$ ist $1^s.27$ grösser als die A. R. der Leidener Meridianbeobachtung. Dieser Unterschied lässt sich nicht erklären durch einen Fehler in Arg.-Oeltzen 8629, denn Arg.-Oeltz.—Helsingf. = $+0^s.25$. Aus der Vergleichung des Cometenortes am 7 September mit der Schulhof'schen Ephemeride von Comet 1871 II geht jedoch hervor, dass durch die A. R. der Leidener Meridianbeobachtung eine bessere Uebereinstimmung erreicht wird. Es ist also die A. R. der A. N. 78 um -1^s corrigirt.

2014 Die in A. N. angedeutete E. B. beträgt nach Paris $Cat._3$ 9040 $+0^s.0088$ $-0''.107$.

2016 Die beiden Bestimmungen in A. Oe. weichen unter einander erheblich ab. Kein Reductionsfehler, noch Angabe über Duplicität gefunden.

2027 Mikrometer-Anschluss an B. D. + 15°, 1577 = $Weisse_2$ 575.

2032 Aus der Uebereinstimmung der übrigen Positionen geht hervor dass die A. R. in A. N. 86 S. 97 ungefähr um 9^s fehlerhaft ist. Dr. Hepperger hat bei seiner Bahnbestimmung des Cometen Coggia 1874 III, Sitz.-Ber. Wiener Akad. 1882, die Hamburger Cometenbeobachtung mit den Meridian-Beobachtungen des Vergleichsterns aus Leiden, Moskau, Berlin und Paris reducirt.

2034 Mikrometer-Anschluss an B. D. + 68°, 485, 1892 Mai 12.

2036-37 Der Stern ist in keinem anderen Cataloge gefunden; die Position scheint jedoch durch die zwei Berliner Beobachtungen hinreichend gesichert.

2038 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen 1893 Sept. 5 in unterer Culmination beobachtet.

2049 Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A.G.C.A. 2869 $10^s.90$, $4''.8$ Ep. 1871.2 E.B. $+0^s.002$ $-0''.44$. Die E.B. erklärt den Unterschied der Declinationen.

2051 Der Mikrometer-Anschluss A. N. 94 S. 291 giebt die sehr abweichende Position $37^s.80$, $50''.3$.

2053 Die Correction $-10''.3$ von B. Z. folgt aus einer brieflichen Mittheilung von Geheimrath Auwers; die Position A. G. C. 2874 ist $54^s.15$, $17''.8$; keine E. B.

2075 Der guten Uebereinstimmung von 2075 und 2076 wegen ist B. B. VI 1643 wohl um 1^s zu corrigiren.

2109 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen 1894 März 27 beobachtet.

2123 Nach Mittheilung von Director Graham ist die Position Cambridge (E.) A.G.C. $12^s.62$, $31''.7$ Ep. 1876.2.

2126 Der Ort ist dem Berliner Circular Nr. 154 entnommen, da in A. N. die Beobachtungen aus Kremsmünster und Hamburg verbunden sind.

2128 Mikrometer-Anschluss an B. D. + 65°, 597, 1892 Mai 12.

2131 Mikrometer-Anschluss an B. D. + 61°, 1002, 1892 Mai 12.

2133 Mikrometer-Anschluss an B. D. + 65°, 597, 1892 Mai 12.

2158 Die Correction ist von Dr. Palisa brieflich mitgetheilt.

Nr.

2170 Herr Observator Wilterdink in Leiden fand im Refractor keinen Stern an dem angezeigten Orte, wohl einen kleinen Stern in gleicher Decl. jedoch 13^s vorangehend. Die Correction von -2^m, welche genau auf Paris Cat.$_3$ 9637 passt, wird auch angezeigt durch den Werth der Praec. in Decl. in Palisa's Verzeichnisse A. N. 91.

2182 Nach Mittheilung von Director Graham ist nach Cambridge (E.) A. G. C. der Ort $28^s.54$, $15''.8$, Epoche 1875.7. Die A. R. aus B. Z. ist also etwa 1^s zu klein.

2184 Mikrometer-Anschluss an B. D. $+26°$, 1679, 1892 Mai 19.

2185 Mikrometer-Anschluss an B. D. $+1°$, 1939 = Albany A. G. C. 3083, 1892 Mai 12.

2198 Aus B.D. 54°, 1186 und aus Cambridge (M.) A. G. C. 2999 geht übereinstimmend hervor dass A. N. um $-10'$ zu corrigiren ist.

2210 Romberg's Vermuthen, A.N. sei in A. R. um 30^s zu vermehren wegen der Identität mit B. D. $+25°$, 1807, hat sich nicht bestätigt. Wirklich existirt nach Mittheilung von Dr. E. F. v. d. S. Bakhuyzen an dem angegebenen Orte ein feines Sternchen unter 10^m, welches Romberg in Publ. XVIII A. G. auch erwähnt.

2211 Da Küstner 265 auf 2 stimmende Beobachtungen beruht, ist die Kremsmünster Declination in A. N. um $-10''$ corrigirt.

2212 Der Mikrometer-Anschluss an Weisse$_2$ 1496 A. N. 91 S. 301 giebt 1875.0: $7^h52^m34^s.53+38°20'39''.4$ also die Declination zu gross.

2215 Da die Identität von 2215 und B. D. 14°, 1800 fraglich war, ist B. D. 1800 mit B. D. 1808 verglichen. Hieraus geht hervor dass 1800 um $+4^s.8$ zu corrigiren ist. In den Col. „Secunden der Quelle" ist die so verbesserte A. R. von B. D. 1800 mittgetheilt.

2218 Mikrometer-Anschluss an B. D. $+38°$, 1851, 1893 Mai 17.

2223 Der Unterschied van A. Oe., 8543 und 8544 ist $0^s.74$ und $2''.6$. Duplicität ist nicht erwähnt.

2227 Die durch Romberg Publ. XVIII angezeigte Correction von -1^m wird durch die andere Bestimmungen in Pulkowa und Greenwich hinreichend bestätigt.

2242 Arg.-Oeltzen 8581 um $+1^m$ corrigirt nach B. B. V. S. IX.

2243 Die Correction in Decl. von $2'$ folgt aus der Königsberger Beobachtung des Brorsen'schen Cometen von 22 Mai 1867 (cf. A. N. 74 S. 243) Rümker 2395 und Bonn A. G. C. 6398.

2244 Bei der Reduction auf 1874.0 ist der E. B. von Romberg schon an die Pulkowaer Position in A. N. angebracht.

2265 Durch briefliche Mittheilung von Dr. Knorre ist diese Correction bestätigt.

2272 Da aus den Washington Obs. 1880 und 1884 folgt dass sich der Unterschied von $8''$ zwischen den Declinationen von 1869 und 1882 nicht erklären lässt, ist an der Declination in A. N. ausserhalb der Correction von $+1''$ für Biegung (A. N. 78 S. 167) noch eine weitere Correction von $-10''$ angebracht.

2275 Dieser Stern findet sich auch in Washington Obs. 1880 S. 180 Nr. 348 und 1884 S. 312 Nr. 347(1); für 1875.0 ist der Ort $25^s.27$, $13''.5$; $8^m.2$. 3 Beob.

Nr.

2283 B. D. hat hier zwei gleich hellen Sterne $9^m.1$, deren Oerter sind:

B. D. 2429 $8^h\,7^m\,29^s.8$ $-5°\,24'.7$
B. D. 2430 30 .3 24 .3

Es ist nicht zu entscheiden welchem dieser Sterne die Position in A. N. entspricht.

2284 B. D. hat hier unter mehreren einander nahe stehenden Sterne:

B. D. 2434 $8^h\,6^m\,36^s.2$ $-5°\,23'.6$ 10^m.
B. D. 2435 37 .1 22 .1 8 .8.

Der zweite stimmt in Grösse und Position am besten mit A. N. Beide Sterne Nr. 2283 und 2284 gehören zu dem Sternhaufen h. 496 = G. C. 1637.

2285 Mikrometer-Anschluss an B. D. $+6°$, 1900 = Weisse$_1$ 129.

2287 Die Correction von $-1'$ in Decl. wird bestätigt durch Bessels Zonen, Berlin A. G. C. und durch Pulkowa Catalog 1875.0, 1852: $9^m.3$, $11^s.78$, $33''.7$.

2298 Beim Nachsehen in den Beobachtungsbüchern zeigte sich dass A. R. A. N. um $+50^s$ zu corrigiren sei. Nach dieser Berichtigung stimmt der Ort mit M_2 2160 und Harvard Zone 40 und 41 Nr. 400, wo man findet auf 1875.0 reducirt: 9^m-10, $3^s.46$, $6''.7$.

2303 Die Correction nach Romberg's Note, Publ. XVIII, gründet sich auf die Königsberger Beobachtung des Cometen III 1881 10 Juli 1881.

2306 Die Correction gründet sich auf die Declinationen von 2305 und 2307.

2309 Die A. R. von A. N. 79 137 is um -10^s zu corrigiren; siehe Romberg Publ. XVIII A. G. Diese Bestimmung Ep. 1872.05 giebt $31^s.10$, $31''.0$ und ist als zweite Leidener Meridianbeobachtung zu betrachten.

2321 Mikrometer-Anschluss an B. D. $+60°$, 1132 = Helsingfors A. G. C. 5521.

2339 Wie Herr Romberg in seine Bemerkungen Publ. XVIII A. G. mittheilt, hat Dr. Knorre durch Anschluss an W_2 VIII 523 für 1875.0 erhalten $29^s.77$, $39''.4$. Herr Pannekoek fand am Leidener Refractor durch Anschluss an W_2 VIII 370: $29^s.23$, $42''.4$; er bestimmte ferner ein Stern 11^m; $8^h19^m27^s.85$ $+19°27'54''.5$, dessen Ort nicht mit der Berliner Position A. N. 102 S. 297 stimmt. Dr. Knorre hat auch in den Beobachtungsbüchern vergebens nachgesucht was die Ursache der Abweichung in Decl. der beiden stimmenden Berliner Meridianbeobachtungen von den anderen Declinationen sein kann.

2376 Nach brieflicher Mittheilung von Geheimrath Auwers ist keine Spur von E. B. vorhanden. Berlin A. G. C. 3398 ist $14^s.81$, $25''.0$. Ep. 1870.7.

2378 Leipzig A. G. C. giebt 21 .82, $40''.2$; $9^m.2$ Ep. 1869.2 (2 Beob.).

2391 Nach brieflicher Mittheilung aus Berlin, war die Decl. in A. N. 81 S. 70 durch irrthümliche Reduction entstellt. Statt $+53°22'13''.5$ ist zu lesen $53°22'35''.9$. Diese Correction ist angebracht.

2437-38 Duplex. praec. E. B. $-0^s.0292$ $-0''.592$ nach Stumpe A. N. 125 S. 403 und Bonn A. G. C.
„ -0 .0275 -0 .595 „ Bonn Beob. Bd. VII Verz. von 250 St. 77.
„ -0 .027 -0 .596 „ Nobile A. N. 100 S. 227
„ -0 .0214 -0 .624 „ Paris Cat. 10726 S. [49].
„ -0 .0275 -0 .595 „ Pulk. Cat. 1875.0 nach B. B. VII.
„ -0 .0269 -0 .593 „ Engelmann A. N. 70 S. 287.

Nr.

2439 Duplex seq. E. B. —0ˢ.0042 + 0″.064 nach Nobile A.N. 100 S. 228.

2450 Leipzig A.G.C. 5ˢ.14, 16″.4; 8ᵐ.7 Ep. 1869.20 (2 Beob.).

2452 B.D. + 18°, 2040 ist mit B. angedeutet, kommt jedoch in B.B. VI nicht vor. Wohl B.D. 2039. Der Unterschied zwischen 2039 und 2040 ist 6ˢ in A.R. und 0′.4 in Decl.

2456 Der Buchstabe B. hinter B.D. — 0°, 2063 gehört B.D. 2061 an.

2494 Mikrometer-Anschluss an B.D. + 13°, 2019 = Schj. 3297, 1892 Mai 19. Stern schwächer als 9.5.

2496 Nach brieflicher Mittheilung von Dr. Knorre ist durch unrichtige Reduction auf den scheinbaren Ort die Decl. um + 17″.6 zu corrigiren.

2510 Mikrometer-Anschluss an B.D. + 58°, 1167 = Helsingfors A.G.C. 5780, 1892 Mai 17.

2519 Mikrometer-Anschluss an B.D. + 57°, 1190 1892 Mai 17.

2532 E.B. —0ˢ.001 —0″.20 nach Porter Prop. motions 500.
„ —0 .0000 —0 .109 „ Paris Cat. 11188.
„ —0 .0026 —0 .231 „ Stumpe A.N. 125 S. 404; auch in Berlin A.G.C.

2539 Die Decl. von A.N. 81 ist 10″ grösser als von A.N. 84, und da dieser letzte Werth mit Weisse_1 1507 stimmt, ist dieser beibehalten.

2545 Die Correction wird durch die von Romberg angeführten Quellen und durch M_1 3847 bestätigt.

2563 Die Declination der zweiten Beobachtung aus Leiden A.N. 85 S. 199 ist 18″.7 statt 10″7 zu lesen.

2566 Nach brieflicher Mittheilung von Dr. Knorre würde die A.R. A.N. vielleicht um —1ᵐ zu corrigiren sein. Diese Meinung wird nicht bestätigt durch Weisse und Schjellerup, deren A.R. sehr gut mit A.N. stimmen. In B.D. findet sich 1ᵐ früher kein Stern.

2580 In Wien ist nach A.N. 111 S. 289 (Autorität Struve Pos. med.) 1100 praec. beobachtet.

2606 Weisse und B.Z. sind nach den A.R. in A.N. und B.B. VI 2028 um —5ˢ corrigirt.

2607-09 Dieser Stern findet man in keinem anderen Cataloge.

2612 Mikrometer-Anschluss an B.D. + 49°, 1834. 1893 Januar.

2615 Mikrometer-Anschluss an B.D. + 59°, 1236 = Helsingfors A.G.C. 5942.

2617 Leidener Meridianbeobachtung vom 29 Marz 1894, brieflich mitgetheilt.

2631 Nach brieflicher Mittheilung von Dr. Holetschek ist dieser Stern am Mittagsfernrohr in Wien beobachtet; die Bestimmung ist jedoch sehr unsicher wegen Schwäche des Objects, und wohl auszuschliessen. Vielleicht ist 2631 identisch mit 2630.

2635 Herr A. Pannekoek hat 1896 März 22 nachgesucht ob er an dem Orte der B.D., ausserhalb des in Leiden beobachteten Sterns, noch einen zweiten Stern finden konnte; es war keiner da. Durch Anschluss an anderen Sternen zeigte es sich dass die A.R. der B.D. 5ˢ fehlerhaft war.

2640 Nach brieflicher Mittheilung des Herrn Dr. Knorre ist die Declination um + 9″.0 corrigirt worden.

Nr.

2641 In Romberg's Berichtigung zu $9^h7^m48^s + 47°25'.1$ ist der 15 Juni 1877 in Kremsmünster benutzte Vergleichstern B.D. 47° 1674 genannt; er war B.D. 47° 1675.

2642 Nach Mittheilung von Dr. E. F. v. d. S. Bakhuyzen ist die A.R. von A.N. um -2^s corrigirt worden.

2646 Mikrometer-Anschluss an B.D. 59° 1238 = Helsingfors A.G.C. 5969.

2656 Nach Mittheilung des Herrn Holetschek ist die Beobachtung im Wiener Mittagsternrohr, der Schwäche des Sterns wegen, wenig zuverlässig. An die Declinationen ist bei der von Holetschek angezeigte Correction von $-6'$, noch die durch die übrigen Beobachtungen erforderte Correction von $+20''$ angebracht.

2662 Mikrometer-Anschluss an B.D. $+58°$, 1196 und 1197 = Arg.-Oeltzen 9983 und 9986. 1892 Aug. 11.

2676 Die Oerter A.N. 81 S. 351 und A.N. 84 S. 243 beziehen sich auf dieselben Beobachtungen. In Lund A.G.Z. findet man Z. 171 und Z. 175 bei den Beobachtungen von B.D. 2006: $9^h27^m45^s.71$ $+37°26'11''.8$ die Bemerkungen „✻ suit". Dieser Stern, der in Lund nicht scheint beobachtet zu sein, ist vermuthlich B.D. 2007.

2677 Leipzig A.G.C. $8^m.6$; $57^s.55$, $56''.5$. Ep. 1869.16 (2 Beob.). Weisse, B.Z. ist also wahrscheinlich um $10''$ zu corrigiren.

2678 Die Correction der Declination $-5'$ gründet sich auf die Vergleichung der Hesperia Beob. am 20 Februar 1866 in Königsberg und 19 Februar in Leiden, A.N. 67 S. 362, welche durch diese Correction in gute Uebereinstimmung gebracht werden. Die Position stimmt dann auch mit B.D. 2197.

2688 Obgleich es nicht erwähnt wird, ist es wahrscheinlich dass 2687 praec., 2688 seq. ist.

2695 Dr. Knorre berichtet: Nach dem Manuscripte ist diese Position um $+10'$ und die Praecession eines Jahres zu corrigiren, sie ist also 1870.0: $9^h30^m45^s.11 + 58°43'8''.5$. Durch die Leidener Meridianbeob. bei unterer Culm. 1895 Sept. 28 ist diese Correction bestätigt.

2705 Die Uebereinstimmung der Wiener Beobachtung mit den anderen Beobachtungen ist erhalten durch die Correctionen -1^s und $20''$. Dr. Holetschek bemerkt dass die Beobachtung wegen Schwäche des Objects nicht zuverlässig ist.

2707 Dieser Stern findet sich nicht in B.B. VI, auch nicht bei Lalande, Bessel und Rümker, die Buchstabe B in B.D. ist also zu streichen.

2715 Die A.R. von Bessel ist 1^s kleiner als A.N. Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A.G.C. 3904: 28^s18, $57''.9$. Ep. 1870.3, keine merkbare E.B. Die A.R. von B.Z. ist also um 1^s zu corrigiren.

2717 Leidener Meridianbeob. bei unterer Culm. Sept. 1893.

2730-31 In keinem anderen Cataloge. Die Position scheint doch gehörig gesichert.

2742 Nach Mittheilung von Dr. Knorre ist A.N. um 1^s corrigirt. Weisse_2 840, B.Z. 280 giebt $47^s.75$, $35''.0$; 9^m.

2746 Weisse_1 878: $4^s.16$, $10''.8$; 9^m. Von den zwei nahe liegenden Sternen B.D. 2211 und B.D. 2212 ist in B.D. praec. $9^m.0$, seq. $8^m.8$ dagegen bei Weisse praec. 9, seq. 9-10.

Nr.

2755 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen ist in A.N. A.R. um $+2^s$, Decl. um $-10''$ zu corrigiren.

2764 Diese Correction wird bestätigt durch Göttingen B.D. $-0°$, 2256: $8^m.0\ 9^h\ 44^m\ 2^s.2 - 0°\ 50'.1$ und durch Karlsruhe Heft II S. 188: $1^s.81$, $22''.8$; $8^m.0$.

2769 Nach brieflicher Mittheilung von Herrn Wilterdink ist Decl. A.N. um $+10'$ corrigirt. Wie auch in Pulkowa Cat. 1875.0 bemerkt, ist die Decl. von B.D. 587 12′ zu gross.

2775 Mikrometer-Anschluss an B.D. $+13°$, 2167, 1892 Juni 3.

2777 In Weisse ist die Reduction der Decl. auf 1825.0 mit falschem Zeichen angebracht. Nach Luther's Reductionstafeln ist die anzubringende Correction $-3'\ 26''.5$.

2786 Die von Romberg angegebene Correction wird durch die Leidener Beobachtung und den Markree Catalog bestätigt.

2797 Nach brieflicher Mittheilung von Dr. Knorre ist A.R. um -10^s corrigirt.

2798 Leipzig A.G.C. $8^m.9$; $50^s.57$, $44''.4$ Ep. 1869.65 (2 Beob.).

2800 Da die Position in den A.N. auf zwei gut stimmende Berliner Beobachtungen beruht, ist die Decl der Greenw. 6 Year Cat. vermuthlich $10''$ fehlerhaft.

2815-16 Die Correction von Romberg -8^s wird durch viele Cataloge bestätigt. Man hat:

Lalande 19567	$9^h54^m23^s.43$	$+9°33'12''.4$	Ep. 1798.18
Weisse_1 1138	23 .68	10 .0	„ 1823.24
Rumker 3038	23 .36	8 .1	„ 36
Paris_2 12298	23 .64	5 .7	„ 61.3
A.N. 69 S. 71	23 .44	6 .1	„ 65.73
Paris_3 12298	23 .40	4 .8	„ 72.2
Glasgow_1 2600	23 .32	4 .2	„ 75
Public. XVIII A.G.	23 .35	3 .3	„ 86.27
Glasgow_2 858	23 .29	2 .7	„ 90

Deutliche E.B. in Decl.

2849 A.N. um $10''$ corrigirt, wie Bessel's Zonen und Bonn A.G.C. erfordern.

2850 Romberg betrachtet diese Position durch Anschluss bestimmt; der Anschluss fand jedoch statt am Meridiankreise an nahen Fundamentalsterne, sehe A.N. 85 S. 383. Der Stern findet sich sonst in keinem Cataloge; seine Position ist jedoch gesichert durch 2851.

2852 Leipzig A.G.C.: $8^m.6$; $9^h\ 58^m\ 33^s.91 + 9°\ 15'\ 35''.7$ Ep. 1884.21. 2 Beobachtungen.

2855 Der in Berlin A.N. 88 beobachtete Stern ist nicht derselbe als Weisse_2 1229 und Bonn A.G.C. 7455, sondern ist nach einer brieflichen Mittheilung von Prof. Deichmüller ein Comes, der in Bonn 1873 März 27, $9^m.5$, $13''$ dist. praec. bor. geschätzt ist.

2866 Die Königsberger Declination ist richtig wie aus der Victoria Beob. 1881 März 6 daselbst angestellt hervorgeht. M_1 4925 ist also um $-1'$ corrigirt.

Nr.

2883 Mikrometer-Anschluss A.N. **101** um + 17″.6 (Praec.) corrigirt. Die starke Abweichung der Beobachtung 1881 Oct. 25 des Kometen Denning 1881 V in Odessa, wird dadurch erheblich verringert. Siehe Veröffentlichungen der Karlsruher Sternwarte Heft III S. 178.

2889 Harvard Coll. Cat. of 1213 stars Nr. 437 hat: $8^m.5$, $53^s.09$, 2″.4. 3 Beob.

2907 Der in Berlin und Pola bestimmte Stern is nicht identisch mit dem Sterne aus dem Markree Cat., wie Herr Pannekoek 1896 März 22 am Refractor nachgewiesen hat. Der in Markree beobachtete Stern ist ungefähr eine Grösse heller als der Stern in A.N.

2918 Romberg's Verbesserung von — 30′, Publ. XVIII A.G., wird auch durch Rümker 3121 bestätigt.

2932 Die Declination ist nach der Reduction auf 1825.0 aus Bessel's Zonen mit Luther's neue Reductionstafeln um — 9′30″ zu verbesseren.

2950 Dieser Stern wurde in keinem Cataloge gefunden, ist jedoch durch die gut stimmende Berliner Beobachtung 2951 hinreichend gesichert.

2960 Von den in A.N. **79** und **81** publicirten Leidener Meridianbeobachtungen findet man in A.N. **85** eine verbesserte Reduction. Diese ist unter 2960 angenommen.

2967 Genäherte Meridianbeobachtung in Leiden 1893 März 28.

2969

E.B.	$+0^s.0122$	— 0″.883	nach Pulkowa Cat. und Argelander 250 Sterne Nr. 94.
„	+ 0 .011	— 0 .89	„ Porter Proper motions Nr. 572.
„	+ 0 .0108	— 0 .902	„ Bischof Eigenbewegungen S. 13.
„	+ 0 .0089	— 0 .884	„ Bonn A.G.C. und Stumpe A.N. **125** S. 405.

Im Pulkowa Cat. ist die Praec in A.R. $3^s.7308$, in Bonn A.G.C. und in diesem Cataloge $3^s.7305$.

2973 Dieser Stern findet man auch an derselben Stelle auf C. H. F. Peters Karte Nr. 1 und 2 $10^m.5$ und auf der Pariser Karte Nr. 31 11-12^m.

2979 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen die Decl. in A.N. um 1′ verbessert. Helsingfors bemerkt: Dupl. 10″ seq.; comes $9^m.4$.

2993 Mikrometer-Anschluss an B.D. + 8°, 2368 = Paris 12864.

3002 Vielleicht E.B.

3012 Wegen der schlechten Uebereinstimmung mit B.D. habe ich 1892 April 8 den Stern am Leidener Refractor angeschlossen an B.D. + 12°, 2219 = Paris Cat. 12887, und an B.D. + 12°, 2235 = Paris Cat. 12979 (bloss in α) und fand genähert: $10^h26^m40^s.7 + 12°16'.0$, sodass B.D. + 12°, 2233 in A.R. 2^s zu gross und in Decl. 3′ zu südlich ist.

3017 Die Ursache des beträchtlichen Unterschiedes zwischen Kremsmünster und den beiden gut stimmenden Positionen Arg.-Oeltzen und Cambridge (M.) ist nicht leicht nachzuweisen.

3025 Die in dem Cataloge angenommene Position ist der A.N. **85** S. 202 publicirte Mittelwerth.

3031 Die Correction von B.B. VI 2508 um — 2′ wird durch die Berliner Beobachtung und die brieflich mitgetheilte Leidener Meridianbeobachtung von Dr. E. F. v. d. S. Bakhuyzen bestätigt.

3041 Die Decl. der A.N. um + 18″.7, den Betrag der Praecession, verbessert.

3045 Mikrometer-Anschluss an B.D. + 5°, 2370 und 2371.

Nr.

3046 Da A.R. B.D. + 35°, 2171 3^s grösser ist als A.R. A.N., hat Dr. E. F. v. d. S. Bakhuyzen den Stern 1893 Sept. auf's neue im Meridian beobachtet und den früheren Ort bestätigt gefunden. B.D. ist also 3^s zu gröss.

3049 Genäherte Meridianbeobachtung 1893 März.

3050 Mikrometer-Anschluss A.N. 77 um — 20″ corrigirt. Diese Correction wird angezeigt durch die Beobachtungen von Clio Febr. 28 and März 1 A.N. 77 S. 353, welche mit der richtigen Decl. des Vergleichsterns reducirt sind.

3052 Mikrometer-Anschluss an B.D. + 48°, 1886 = A.Oe. 11054-5 in A.R. und an B.D. + 48°, 1883 = A.Oe. 11011 in Decl. 1893 April 22.

3057 Nach brieflicher Mittheilung von Dr. Knorre gilt die Decl. A.N. für 1876.0 und nicht für 1875.0. Die Declination deshalb um + 18″.8 corrigirt.

3069 E.B. — $0^s.0303$ — 0″.070 nach Pulkowa Cat.
„ — 0 .029 — 0 .06 „ Porter Prop. motions Nr. 589.
„ — 0 .0320 — 0 .067 „ Stumpe A.N. 125 S. 405 und Bonn A.G.C.

3072 A.N. 85 S. 202 ist die verbesserte Position der Leidener Meridianbeobachtungen A.N. 79 138, 147 und 81 155.

3073 Leipzig A.G.Z. $9^m.1$ $10^h\,37^m\,25^s.85$ + 8° 15′ 28″.9 Ep. 1884.21. 2 Beob.

3079 Mikrometer-Anschluss an B.D. + 8°, 2409 = Schjellerup 3933. Später 1893 Sept. Meridianbeob. in Leiden von Dr. E. F. v. d. S. Bakhuyzen.

3081 Die Helsingforser A.G.C. 6471 erfordert die Correction + 30′, wie sie aus den Helsingforser Zone-Beob., B.D. und Arg.-Oeltzen 11101: $8^m.9$ $10^h\,38^m\,41^s.31$ + 59°54′ 33″.0 hervorgeht.

3082 Im Leidener Refractor zeigte sich an dem angegebenen Ort kein Stern; in einiger Entfernung war ein Stern, dessen Position durch Mikrometer-Anschluss an B.D. + 8°, 2409 = Schjellerup 3933: $10^h\,38^m\,37^s$ + 8° 6′.8 wurde gefunden. Dieser Stern ist auch 1894 März 27 am Meridiankreise in Leiden beobachtet; nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen war A.R. $10^h38^m37^s.20$ Decl. + 8°6′51″.5. Da Dr. Knorre berichtete, dass kein Fehler zu finden sei und die Berliner Position auf zwei gut stimmenden Beobachtungen beruht, ist an diese Position keine Verbesserung angebracht. Die Möglichkeit der Stern sei ein variabilis ist nicht ausgeschlossen.

3101 Die Decl. von A.N. ist 24″.5 nördlicher als Weisse$_1$ 745. Die brieflich mitgetheilte A.R. und Decl. nach der Leidener Meridianbeobachtung 1894 März 27 zeigt dass Weisse richtig ist. Eine Correction der Decl. A.N. um — 18″.8 (Praecession) bringt die Berl. Decl. in sehr gute Uebereinstimmung mit der Leidener Beobachtung, daher ist diese Correction angebracht. In Public. der v. Kuffner'schen Sternwarte findet man $8^m.7$; $10^h\,42^m\,37^s.34$ — 6° 30′ 59″.3.

3103 Die Decl. ist um den Betrag der jährlichen Praecession — 18″.9 corrigirt mit Rücksicht auf die Position dieses Sterns in Annals of Harvard Coll. Vol. XV. Catalogue of 1213 stars Nr. 465, welche auf die A.N. 78 und 79 publicirten Beobachtungen beruht.

3104 Meridianbeobachtung und Mikrometer-Anschluss A.N. 94 S. 235 sind um 10^s zu corrigiren, wie sofort aus der Beobachtung von Eunike (181) 1878 März 1 und B.D. hervorgeht. Der Stern findet sich auch in Washington Obs. 1879 S. 214 Nr. 194, und Washington Obs. 1880 S. 182 Nr. 447: $39^s.93$, 33″.6 und $39^s.96$, 32″.5.

Nr.

3158 E. B. $-0^s.0254$, $-0''.116$ nach Pulk. Cat. und Arg. Cat. 250 Sterne Nr. 103.
„ -0.024, -0.08 „ Porter Cat. Prop. motions 612.
„ -0.0271, -0.114 „ Stumpe A. N. **125** S. 405.

3164 Nach brieflicher Mittheilung von Geheimrath Auwers ist Berlin A. G. C. 4344: $10^h\,57^m\,32^s.51$ $+16°\,31'\,35''.2$ Ep. 1870.03. 3 Beob. $Weisse_2$ 10, 1122, sehe Positiones emendatae, $32^s.20$, $37''.2$.

3167 Durch Vergleichung der Declination von Juewa (139) am 17 April 1881 in Königsberg beobachtet, mit den Beobachtungen dieses Planeten an demselben Abend in Wien und O'Gyalla angestellt, findet man dass die Declination von 3167 A. N. ungefähr 20″ zu klein ist. Es ist deshalb die Decl. um den Betrag der Praec. für 1881, 19″.3, vergrössert.

3175 Aus der Vergleichung der Berliner Beobachtung des Planeten Terpsichore, 1881 März 13, A. N. **81** S. 87, der Leidener Meridianbeobachtung dieses Planeten an demselben Abend (A. N. **79** S. 135) und der Washingtoner Beobachtung 22 Februar (A. N. **79** S. 101) mit der Ephemeride geht hervor dass Decl. A. N. 3175 um $+1'$ zu corrigiren ist.

3181 Die von Romberg Publ. XVIII A. G. angezeigte Correction auch bestätigt durch M_2 3677.

3207 A. N. **71** S. 175 giebt die Decl. des praec. 7″.4 südlicher als A. N. **70** S. 289 und A. R. 1^m zu gross. Nach den anderen Bestimmungen ist A. N. **70** S. 289 als richtig angenommen.

3208 Die Bemerkung bei 3207 gilt auch für sequens.

3215 Leipzig A. G. Z. $9^m.6$; $11^h\,9^m\,8^s.59$ $+8°\,27'\,59''.0$ Ep. 1884.15. 2 Beob.

3231 Mikrometer-Anschluss A. N. **100** S. 329 ist dieselbe Bestimmung als diejenige des Sterns *e* im Berl.-Circular 156. Die dabei vermuthete E. B. hat sich nach Schönfeld's Untersuchung Berl.-Circular nicht bestätigt.

3232 Ist Stern *d* aus Berliner Circular 156 in Kremsmünster bestimmt.

3233 Ist Stern *a* aus Berliner Circular 157 in Kremsmünster bestimmt. Vielleicht eine verbesserte Reduction des in Circular 156 erwähnten Ortes.

3242 Nach die Bemerkung von Prof. Schönfeld Berliner Circular 159 sind Weisse und B. Z. um $+20^s$ corrigirt.

3244 Aus der Vergleichung der Declinationen des Planeten Aschera (214) 1880 März 8 in Pola, Leipzig und Königsberg, Berliner Circular Nr. 132 und A. N. **100** S. 241, geht hervor dass die Declination des Vergleichsterns in Königsberg um ungefähr 18″ zu vergrössern sei. Es ist daher die Decl. der A. N. um den Betrag der jährlichen Praecession $+19''.7$ corrigirt. Die Königsberger Beobachtung ist dann in Uebereinstimmung mit Albany A. G. C.

3260 Dieser Stern hat eine starke E. B.; nach Stumpe A. N. **125** S. 405: $+0^s.0479$, $-0''.146$. Sehe Argelander Untersuchungen über neue Sterne mit Eigenbewegungen 324.

3264 Mikrometer-Anschluss an B. D. $+6°$, 2441 = Weisse 11 Nr. 291, B. Z. 157, 1893 April 22. Stern sehr schwach 11^m.

3265 Durch briefliche Mittheilung von Dr. Knorre ist die von Romberg Publ. XVIII A. G. angezeigte Correction in A. R. bestätigt.

Nr.

3267 Wie die Cap-Beobachtung und B. D. zeigen müssen Weisse und B. Z. um 1^m corrigirt werden.

3270 Mikrometer-Anschluss an B. D. + 7°, 2445.

3280 Die Decl. A. N. **102** S. 287 ist um + 10″ zu corrigiren, wie hervorgeht aus der Wiener Beobachtung von Juewa 1881 März 17. A. N. **102** S. 282, welche mit der richtigen Declination reducirt ist. Leipzig A. G. C. $9^m,3$; $11^h\,21^m\,5^s.00 + 8°\,19'\,19''.5$ Epoche 1884,15, 2 Beob.

3291 Siehe Bemerkung bei 1718.

3299 Die A. R. ist in A. N. um 6^s kleiner als in Weisse, Lalande und Paris Cat. Die Declination stimmt. Es wird angenommen dass in A. R. die Praecession mit falschem Zeichen angebracht ist und deshalb A. R. in A. N. um + $6^s.21$ corrigirt.

3300 Nach brieflicher Mittheilung von Dr. Knorre ist die Praec. in A. R. mit falschem Zeichen angebracht worden. Der Ort in A. N. ist daher um + $7^s.20$ corrigirt. Arg.-Oeltzen 11859-60 hat $39^s.93$, 24″.0; 8^m.

3311 Leipzig A. G. Z. $9^m.1$; $11^h\,29^m\,17^s.04 + 6°\,10'\,34''.4$ Ep. 1886.33. 2 Beob.

3317 Nach brieflicher Mittheilung von Geheimrath Auwers Berlin A. G. C. 4475 $11^h32^m15^s.86 + 15°20'37''.2$ Epoche 1870.0. 3 Beob.

3351 Die Bemerkung Luther's Königsb. Beob. 37 Abth. 1er Theil S. 35 zu Zone 75: $11^h35^m30^s.13$, dass die Minute auch 36 sein kann, bestätigt sich nicht. E. B. wurde wahrscheinlich sein, wenn Lal.-Bossert damit nicht in Widerspruch war.

3354 Wahrscheinlich ist diese Beobachtung schon in die Nummer 3352 aufgenommen, obgleich die Differenz ziemlich gross ist.

3358 Der Unterschied zwischen der Berl. Beob. A. N. und B. D. 2397 ist ziemlich gross. Am Leidener Refractor konnte Herr Wilterdink an der Stelle von 3358 keinen Stern finden. Er fand nur einen sehr schwachen Stern: $11^h39^m45^s.5 + 10°46'.7$ (1875.0). Vielleicht wäre also die Berl. Declination um 10′ fehlerhaft. Nach Mittheilung von Dr. Knorre war in der Reduction dieser Beobachtung kein Fehler vorhanden; nur steht bei der Kreisablesung das Zeichen +.

3359 Nach brieflicher Mittheilung von Geheimrath Auwers Berlin A. G. C. 4512: $56^s.35$, 3″.7 Epoche 1870.2. 2 Beob. Leipzig A. G. Z. $56^s.36$, 5″.5. 3 Beob. Epoche 1880.01, 83.57.

3361 Der Stern hat eine starke E. B. daher ist die Ep. der Cordoba Beob. mittgetheilt.

E.B. $-0^s.132$, + 0″.41 nach Melbourne second Cat.
„ −0.1322, + 0.402 „ Stumpe A. N. **125** S. 406.
„ −0.133, + 0.39 „ Porter Prop. mot. 671.

3369 Die Abweichung in Decl. der Königsberger Beob. von den übrigen Declinationen lässt sich nicht aus E. B. erklären, denn man hat:

Weisse 703	$22^s.74$, 43″.3	Epoche	1822.34
M_1 7224	22.71, 47.7	„	1841.34
Harvard Zone	22.76, 45.7	„	1855.29
A. N. **74** S. 247	22.63, 38.8	„	1868.3

Die Declination von Circe (34) 1867 März 14 A. N. **74** S. 244 mit der Königsberger Decl. reducirt, weicht auch ungefähr 10″ von den übrigen Declinationen ab. Es ist deshalb die Declination A. N. um + 10″ corrigirt.

Nr.

3377 Nach brieflicher Mittheilung von Dr. Peter ist dieser Stern Clotho (97) gewesen.

3380-81 Die von Romberg angezeigte Correction, Publ. XVIII A. G., dass die Decl. der Berliner Bestimmung 81 S. 72 N°. 252 um -1^m zu corrigiren ist, wird bestätigt durch die verglichenen Quellen und durch A. N. 105 S. 197.

3383 Nach brieflicher Mittheilung von Dr. Peter ist die A. R. um -1^m, die Decl. um $-1'$ zu corrigiren.

3384 Die Annahme dass die A. R. nicht für 1868.0 sondern für 1869.0 gilt, bringt A. N. 73 S. 367 ganz in Uebereinstimmung mit den übrigen Positionen. Höchst wahrscheinlich beruhen 3384 und 3386 auf denselben Beobachtungen, deren R. A. anders reducirt sind.

3391 Nach brieflicher Mittheilung von Dr. Knorre war das beobachtete Object Amalthea.

3392 Der Fehler in der Epoche zeigt sich sogleich in der entsprechenden Planeten-Beobachtung.

3396 Mikrometer-Anschluss an B. D. $+11°,2411$, 1892 Juni 3.

3397 Aus der R. A. des mit 3397 identischen Sterns Lamont 736, und aus der Proserpina Beobachtung von 28 Febr. 1870 A. N. 76 S. 57 geht unmittelbar hervor dass, wie Romberg, Publ. XVIII A. G., angiebt, die A. R. um $+10^m$ zu corrigiren ist. Die Position von 3397 ist erhalten aus der Position N°. 12 A. N. 76 S. 59, nachdem die Münchener Position davon getrennt war.

3400 Die Epoche ist nicht 1870.0 sondern 1871.0, wie aus der entsprechenden Planeten Beobachtung von Amalthea hervor geht. Der Stern ist nicht 6 Virginis sondern A^2 Virginis; Pulk. Obs. Vol. VIII S. 271 N°. 1800 $38^s.38, 19''.2$; E. B. $— 0^s.0037 + 0''.013$.

3412 Die Epoche der A. R. und Decl. in A. N. ist nicht 1870.0 sondern 1868.0 wie hervorgeht aus der Vergleichung der Beobachtungen von Hecuba (108) in Berlin 1869 April 27 bis Mai 1 mittels dieses Vergleichsterns angestellt, A. N. 81 S. 91, mit der Leipziger Beobachtung desselben Planeten 1869 April 28 A. N. 74 S. 231.

3447

Weisse$_1$ 903 B. Z. 157 giebt für 1875.0	$11^h\,52^m$	$51^s.67$	$+5°\,19'\,41''.5$	9^m	Ep.	1823.27
M_1 7475 „ „		51.81	41.9	9	„	42.31
A. N. 112 „ „		51.16	44.9	8.8	„	85.3
Küstner „ „		51.11	43.4	8.8	„	85.31

Vielleicht schwache E. B. in A. R.

3448

Weisse$_1$ 905 B. Z. 157 giebt für 1875.0	$11^h\,53^m$	$53^s.52$	$+6°\,3'\,56''.5$	9^m	Ep.	1823.27
M_1 7476 „ „		53.27	54.6	9	„	43.07
A. N. 81 „ „		52.68	43.2		„	70.36

Ziemlich deutliche E. B.

3451

Weisse$_1$ 910 B. Z. 67 giebt für 1875.0	$11^h\,54^m$	$4^s.47$	$-3°\,50'\,46''.1$	$8^m.9$	Ep.	1822.28
M_1 7481		4.65	45.0		„	43.35
Göttingen II 3040		4.62	49.2		„	58.32

Die Decl. von A. N. ist also vielleicht um $+5''$ zu corrigiren.

3477 Genäherte Meridianbeob. März 1893 von Herrn Wilterdink. Ein Mikr. Anschluss 1892 Juni 3 an B. D. $+37°$, 2243 gab $24^s.3, 14'.4$.

Nr.

3481 Dass die Epoche 1871.0 statt 1870.0 sein muss, folgt unmittelbar aus der entsprechenden Planetenbeobachtung. B. B. VI + 9°, 2577 (3 Beob.) giebt für 1875.0 $11^h\,56^m\,56^s.67 + 9°\,0'\,24''.0$; $9^m.3$.

3510 Genäherte Meridianbeob. 1893 März von Herrn Wilterdink. B. D. giebt $30^s.6$, 31',6.

3511 Diese Beobachtung ist vermutlich in N°. 3510 aufgenommen.

3518 Man findet von diesem Stern für 1875.0 folgende Oerter:

Weisse$_1$ XI 1016 B. Z. 154	$12^h\,0^m$	$53^s.09$	+ 11° 13'53",3	1823,24
Rümker 3820		52 .88	46 .6	36
Göttingen II 3081		52 .89	49 .8	58.28
M_1 7635		52 .78	55 .4	68.37
Leipzig A. G. Z.		52 .73	47 .5	69.25 3 Beob.
Küstner A. N. 98		52 .71	47 .9	80.32 5 Beob.

Die Declination des Sterns ist in Göttingen II 3081 11° 13' 55".3; nach brieflicher Mittheilung von Prof. Schur ist dieser Werth um — 5".5 zu corrigiren.

3527 Leidener Meridianbeob. 1893 März.

3548

E. B	$-0^s.0417$	+ 0".458	Stumpe A. N. 125
„	— 0 .0401	+ 0 .456	Bischof 337.
„	— 0 .040	+ 0 .41	Porter Prop. mot. N°. 696
„	— 0 .0409	+ 0 .442	M_2.

3554 Weitere Positionen dieses Sterns sind:

Weisse$_1$ 93 B. Z. 75	$12^h\,7^m\,45,79$	— 0° 53' 49".6;	9^m
Trettenero 445	45.60	46 .5;	9

Die Declination der A. N. ist also wahrscheinlich um 10" fehlerhaft.

3578-79

Weisse$_1$ 179 B. Z. 237	$12^h\,12$	49.69	+ 7° 42' 8".6	Ep. 1824.33
Rümker		49.52	1 .0	„ 1852
Yarnall		49.53	5 .4	„ 1862.3
M_1 7904		49.76	0 .6	„ 1868.36

Also keine nachweisbare E. B.

3589 Nach brieflicher Mittheilung von Dr. Knorre ist die A. R. um $+ 10^s$ corrigirt; es bleibt jedoch der Unterscheid von 14".3 zwischen den Berliner und Washingtoner Declinationen.

3594 Bei der Declination aus B. Z. 239 ist die von W. Struve angegebene Correction von — 7".2 (cf. Weisse, S. 247) berücksichtigt.

3611 In März 1893 ist von Herrn Wilterdink, in März 1894 von Herrn v. d. S. Bakhuyzen im Fernrohr des Meridiankreises kein Object an dem angegebenen Orte gesehen. Die nächsten Sterne bis zu $9^m.5$ waren in δ 1' in α 26^s bei 39^s entfernt. In Berlin konnte über diesen Stern kein Ausschluss gegeben werden. Die Karte N°. 13 von Prof. C. H. F. Peters zeigt keinen Stern an der angegebenen Stelle.

3640-43 In A. N. 78 ist die unter 3640 mitgetheilte Cambr. Mer. Beob. von 1871 April 17 verzeichnet als gehöre sie einem anderen Objecte als dem Mai 11, 12 und 15 in Cambr. beobachteten Stern, dessen Position in 3643 mitgetheilt ist. Die A. R. stimmt jedoch mit 3641 und 3642 und den verglichenen Quellen, Trettenero und Göttingen I, weicht aber $0^s.3$ von 3643, Göttingen II und Weisse$_1$ 347 ab. Ueber Duplicität ist nirgends etwas mitgetheilt, sodass vermuthlich 3640 um — 30" zu corrigiren ist.

Nr.

3649 E. B. — 0s.0009 + 0″.201 Arg. Cat 250 St. Pulkowa Cat. 1875.0.
„ — 0 .0025 + 0 .203 Stumpe A. N. 125.
„ + 0 .002 + 0 .18 Porter Cat. Prop. Mot. N°. 717.
„ + 0 .0049 + 0 .171 Cambr. (Mass.) A. G. C. S. (35).

3651 Arg.-Oeltzen 12708 giebt 12h 25m 8s.99 + 74° 8′ 1″.8; 8.9. Die von Romberg Publ. XVIII angezeigte Corr. von — 5s.19, wird durch die beiden verglichenen Quellen bestätigt.

3652-53 Vermuthlich ist die Königsberger Beob. A. N. 69 S. 363 schon in den 5 Königsberger Beobachtungen A. N. 73 S. 64 aufgenommen. In B. D. + 14°, 2511 ist K. durch B. zu ersetzen.

3657 Publ. der. v. Kuffner'schen Sternwarte Bd. III Zone 32 hat 12h 26m 58s.16 — 9° 28′ 52″.3; Weisse$_1$ 428 B. Z. 235 hat 12h 26m 59s.16 — 9° 28′ 54″.5. Dieser Stern zeigt E. B.

3658 Die genäherte A.R. in A.N. ist um — 6s corrigirt, wie Arg.-Oeltzen 12753 12h 28m 5s.11 + 47° 26′ 21″.4; 6m.7 und Armagh Cat. II verlangen.

3660 Leiden A. G. Z. 407 N°. 11 ist nach brieflicher Mittheilung um + 10″ zu corrigiren.

3661 Die A. R. von B. D. 2287 ist 6s grösser als A. N. und die Decl. ist 6′ nordlicher. Nach einer Leidener Meridianbeobachtung 27 März 1894 ist die A. R. in den A. N. richtig, die Decl. ist jedoch um + 1′ zu corrigiren; dieses ist nachher von Dr. Palisa bestätigt.

3683 Die Position in den A. N. ist in A. R. 0s.94 kleiner, in Decl. 4″.9 südlicher als Weisse; da der Stern in keinem anderen Verzeichnisse gefunden ist, lässt sich nicht entscheiden ob E. B. davon die Ursache ist. Was die Position in Weisse$_1$ anbetrifft, so ist zu bemerken dass man mit den alten Reductionstafeln für 1825.0 findet: aus Z. 67 12h 35m 44s.13 — 5° 12′ 33″.2
„ Z. 239 44 .35 26 .4
Mittel 12h 35m 44 .24 — 5° 12′ 29″.8;
wie Weisse 628. In Emendationes et corrigenda corrigirt Weisse die Declinatiion 29″.7 in 33″.2; er hat also angeblich die Decl. Z. 239 verworfen. Reducirt man jedoch die beiden Zonen mit Luther's neue Reductionstafeln und wird nach Struve's Mittheilung, Weisse$_1$ S. 247, für den Anfang von Zone 239 die Correction — 7″.4 und für den Schluss — 5″.7, also für den betreffenden Stern — 7″.0 angenommen, so hat man in guter Uebereinstimmung für 1825.0
nach Z. 67 12h 35m 44 .16 — 5° 12′ 33″.1
„ „ 239 44 .36 33″.6.

3701-02 Beide Leipziger Beobachtungen sind in A. R. um + 1m corrigirt, wie schon von Romberg Publ. XVIII angegeben und durch B. D. und M_1 4615 bestätigt ist.

3712 Leidener genäherte Meridianbeobachtung 1893 März zur Identification des Sterns.

3716 E. B. — 0s.0182 — 0″.351 Bischof N°. 127 (siehe Note Pulk. Cat. 1875.0)

— 0 .0213 — 0 .353 Pulk. Cat. 1875.0 (gleich Argelander).

3722 Die Correction von Romberg, Publ. XVIII A. G., ist von Palisa bestätigt.

Nr.

3734 Nach Mittheilung von Dr. Peter ist das in Leipzig beobachtete Object (41) Daphne. Die von Romberg vorgeschlagene Correction von $+ 1^m$, welche an 3734 angebracht ist, ist deshalb unrichtig.

3736 $Weisse_1$ 801 B. Z. 159 giebt $12^h\,48^m\,12^s.90 + 3°\,10'\,53''.0$, gut stimmend mit Albany. Daher ist A.N. um $+ 10''$ corrigirt.

3737 Die nach den Emendationes in Weisse, S. 251 anzubringende Correction in Decl. von $— 6''.9$ rührt her von der von Struve für Z. 239 ($Weisse_1$ S. 247) angezeigte Berichtigung. Die Position in diesem Cat. ist mit Luther's Reductionstafeln und Struve's Berichtigung erhalten. Nach v. Kuffner's Zone 42 ist der Ort für 1875.0 $12^h\,48^m\,17^s.71 — 6°\,56'\,15''.9$; $9^m.0$.

3741 $Weisse_1$ XII 833 B. Z. 239 mit Struve's Corr. $— 6''.9$ für Zone 239 ($Weisse_1$ S. 247) giebt für 1875.0 $12^h\,49^m\,50^s.06 — 6°\,43'\,51''.5$.

3748 Die bei 3683, 3737 und 3741 angezeigte Corr. $— 6''.9$ ist auch hier an Weisse angebracht.

3752 E. B. $— 0^s.0573 + 0''.165$ Bischof
„ $— 0\,.0560 + 0\,.192$ Arg. B. B. Bd. VII Verzeichniss 250 Sterne. Pulk. Cat. 1875.0
„ $— 0\,.054 + 0\,.17$ Porter Prop. mot. N°. 743.

3792 Dieser Stern zeigt bedeutende E. B. in α.

Weisse	$13^h\,1^m\,58^s.59$	$— 6°\,38'\,38''.7$
$Si_2 — 6°\,251$	58 .65	39 .4
A. N. Engelmann	57 .66	34 .4
v. Kuffner Zone 384, 40	57 .49	34 .7

3796 Die A. R. in den A. N. um $+ 1^h$ vergrössert. Ein Stern diesser Grösse findet sich nicht in den B.D. an dem in den A. N. angezeigten Ort, wohl in 13^h.

3798 $Weisse_1$ 5 B. Z. 81 giebt für 1875.0 $13^h\,2^m\,42^s.67 — 3°\,59'\,19''.1$. Daher ist M_1 um $+ 1^s$ zu corrigiren.

3803 Der Ort in A. N. 108 S. 185 ist zusammengestellt aus einer Berliner Meridianbeobachtung und zwei Beobachtungen aus Bonn Bd. VI S. 111. Das Mittel der beiden Bonner Beobachtungen ist auf 1875.0 reducirt: $13^h3^m36^s.75 + 20°48'1''.7$; 7^m9.

3809 E. B. nach Bischof. N°. 354 $— 0^s.0322 + 0''.314$, und nach W. Luther A. N. 111 S. 103 $— 0^s.0295 + 0''.277$. Göttingen Cat. II N°. 3388 giebt für den auf 1875.0 reducirten Ort: $13^h5^m10^s.80 + 10°16'52''.5$ und $Weisse_1$ 40 B. Z. 232 $13^h5^m11^s.80 + 10°16'35''.6$.

3811 $Weisse_2$ 67 ist um $— 10^s$ zu corrigiren.

3816 $Weisse_1$ 70 B. Z. 77 und 80 giebt $13^h6^m27^s.32 + 2°47'43''.7$; 9^m.

3824 Der Ort A. N. 76 ist um $— 1^s$ corrigirt, wie nicht bloss Weisse B. Z. und Göttingen Cat. II, sondern auch die Leipziger Beobachtung der Antiope 1870 März 23 erfordern.

3827 Nach Auwers Berl. A. G. C. 4866 $10^s.11$, $20''.3$; Ep. 1870.9; 2 Beob.

3839 Zwischen dem Ort in A. N. und in München I zeigt sich ein erheblicher Unterschied. $Weisse_1$ 188 B. Z. 244 giebt $13^h12^m38^s.00 — 8°30'8''.6$.

3841 In B. D. ist der Buchstaben B durch K zu ersetzen.

Nr.

3842 Die genäherte A. R. in A. N. ist um + 1^s corrigirt. Die Epoche der Beobachtungen in Lund ist 1880 April 22 und 27; diese Beobachtungen deuten auf eine grössere E. B. in Decl.

3847 Mikrometer-Anschluss an B. D. + 73°589 September 1892.

3848 Die genäherte A. R. in A. N. um — 10^s corrigirt, wie nicht nur Gr. 9 Year Cat. No. 1222, sondern auch Arg. Oeltzen 13558 13^{h}15^{m}44^s.33 + 47°55′29″.7; 6^m.7 verlangt.

3854 Mikrometer-Anschluss an B. D. + 73°589 Sept. 1892. Stern heller als 9^m.5.

3870 Die von Romberg, Publ. XVIII A. G., angezeigte Correction von — 10^s wird bestätigt durch die Position in Karlsruhe Heft IV S. 160; dieselbe ist 13^h 21^m 10^s.68—6°10′ 0″.8; 8^m.0.

3876 Die Correction von 1^m ist nach Publ. XVIII A. G. von Dr. J. Palisa bestätigt.

3890 Die Position dieses Sterns ist:

Weisse$_1$ hora XIII N^0. 391 B Z. 238	13^{h}25^{m}14^s.60	— 9°36′42″.8	Ep. 1824.3
Santini$_2$ — 10°294	14 .11	40″.0	Ep. 1840?
Munchen$_1$ N^0. 9252	13 .97	46″.4	
A. N. **101**	13 .87	47″.0	Ep. 1880.36

Eigenbewegung ist deshalb wahrscheinlich wie auch in A. N. **101** S. 206 angezeigt ist.

3899—3901 Mikr. Anschluss an 9 Year Cat. 1241 in Toulouse A. N. **102** S. 206 giebt 13^{h}26^{m}57^s.76, 79°37′40″.4. Die Declination in A. N. **101** S. 382 ist um + 1′ zu corrigiren; die Declination in Kasan A. G. Z. bedarf der Correction von — 1′. Die verschiedenen Positionen dieses Sterns stimmen schlecht.

3909 Mikrometer-Anschluss an B. D. + 72°,621 Oct. 1892.

3915 Die Position dieses Sterns ist:

Lalande 25186	13^h 31^m 59^s.92	— 6° 57′ 52″.1;	9^m
Weisse$_1$ 524 B. Z. 239	32 1 .09	57 54 .8;	9
v. Kuffner's Zone 43	32 0 .36	58 0 .2;	8 .6

Aus der Vergleichung der verschiedenen Beobachtungen geht hervor dass die A. R. von Weisse und Brüssel um — 1^s zu corrigiren sind.

3936 Mikrometer-Anschluss an Weisse$_1$ XIII N^0. 600.

3962 Die Correction der Rectascension von 10^s (Publ. XVIII A. G. S. 50) wird auch durch die Beobachtung in Cordoba bestätigt.

3999 Radcliffe Catalogue 1890.0 3623 giebt 13^h 52^m 55^s.80 — 4° 48′ 32″.21; 8^m.7. Ep. 1885.34. E. B. nach Radcl. 0^s.0000 — 0″.090.

4004 Die Correction von — 10^s wird auch von Cordoba G. C. 18744 bestätigt.

4025 96 Virginis. Die Position dieses Sterns ist:

Pulk. Obs. Vol. VIII S. 279 N^0. 2092	14^h 2^m 21^s.08	— 9° 44′ 30″.1;	6^m.5 E. B. — 0^s.0007 + 0″.019
Radcl. Cat. 1890.0 N^0. 3664	20 .97	28″.2;	7-6

Die Correction der Decl. A. N. wird durch diese Quellen bestätigt.

Nr.

4049 Das Mittel von 5 Beobachtungen von Becker, Catalog von 571 Bradley Sterne, giebt $14^h\,7^m\,50^s.77$ $-5°\,21'\,55''.7$.

E. B. $-0^s.0217 + 0''.09$ Auwers
„ $-0\,.0217 + 0\,.095$ Stumpe
„ $-0\,.0224 + 0\,.072$ Glasgow II.

4053 Mikrometer-Anschluss an B. D. + 41°,2471, identisch mit Weisse_2 XIV 72.

4055 Duplex. Struve Pos. med. 1603 giebt an Simplex $7^m.5$. Nach Struve ist die Position $14^h\,10^m\,44^s.61$ $+20°\,42'\,26''.1$ Ep. 1838.9.

4073 Die R. A. in A. N. 81 ist um 1^s verringert, wie die Leidener Mer. Beob. A. N. 69, Santini_3 1642, Küstner 439 und Weisse_1 335 B. Z. 245 erfordern. Die Position von Weisse_1 ist $14^h\,23^m\,8^s.31$ $-12°\,20'\,15''.2$; 9^m. Die Position von A. N. 94 S. 291, obgleich an A. N. 81 S. 73 entlehnt, ist in R. A. $0^s.29$ kleiner, in Decl. $0''.2$ nördlicher. Die Praecession in R. A. in A. N. 81 ist unrichtig, statt $3^s.204$ ist zu lesen $3^s.240$.

4096 In B. D. ist K. durch L. zu ersetzen.

4099 In Romberg Genäherte Oerter, Publ. XVIII A. G., lese man $-17°\,15'5$ statt $-17°\,5'.5$.

4100 Nach Mittheilung von Director Graham ist die Position in Cambr. A. G. Z. $14^h\,33^m\,0^s.06$ $+29°\,28'\,14''.7$ Ep. 1883.4.

4102 Die Correction von -3^m ist brieflich von Herrn Obs. Wilterdink mitgetheilt.

4104 Die Position in A. N. 74 gilt für die Mitte, indem an die beobachtete Position des Hauptsterns die Corr. $+0^s.22$ und $-0''.6$ angebracht ist. Die hier mitgetheilte Position gilt für den Hauptstern. Die Position des Begleiters Σ 1864 seq. ist nach Pulk. Cat. für 1875.0 N°. 3270 $14^h\,34^m\,51^s.71$ $+16°\,57'\,17''.4$. E. B. $-0^s.0012 - 0''.020$.

4106 Die Position nach Arg. Weiss 11355 ist $14^h\,35^m\,48^s.07 - 22°\,53'\,22''.8$. Die Helligkeitsangaben dieses Sterns sind sehr verschieden. Arg. Weiss hat 6^m, $7^m.8$, $6^m.7$. B. D. 3821 $7^m.2$.

4107 Nach Mittheilung von Director Graham ist die Position nach Cambr. A. G. Z. $14^h\,35^m\,58^s.08$ $+29°\,36'\,0''.5$ Ep. 1877.1 (3 Beob.)

4108 Nach Auwers Berl. A. G. C. 5503 $8^s.54$, $30''.4$ Ep. 1870.9 (2 Beob.)

4110 Dieser Stern zeigt E. B. Die Positionen sind:

Weisse_2 772 B. Z. 290	$14^h\,37^m\,13^s.17$	$+18°\,36'\,17''.8$	Ep.	1825.5
Rümker 4797	13 .36	7 .4	„	1844
Pola	13 .83	35′ 57 .9	„	1880.44.

4120 Leipz. A. G. Z. $14^h\,43^m\,43^s.90$ $+10°\,48'\,52''.7$; $8^m.9$ Ep. 1868.33 (2 Beob.)

4122 Leipz. A. G. Z. $14^h\,44^m\,1^s.17$ $+12°\,51'\,27''.8$; $8^m.4$ Ep. 1868.38 (2 Beob.)

4129 Die Declination nach Weisse_2 1016 B. Z. 367 ist $8''.3$ südlicher als diejenige von Weisse_2 1015 B. Z. 366. Die Decl. von W_2 1016 ist nun um $10''$ corrigirt, wodurch die beiden Beobachtungen von Bessel unter einander und mit A. N. in guter Uebereinstimmung sind.

Nr.

4135-6 Die Bemerkung von Weiss die A. R. von Arg. Weiss 11538 soll 1^s zu klein sein, wird durch die Positionen in den A. N. und durch M_1 10733 nicht bestätigt.

4149

E. B.	$-0^s.042$	$-0''.50$	A. N. **111** S. 75
„	−0 .042	−0 .54 (approx.)	nach Tacchini-Holden Cat. S. 64.
„	−0 .042	−0 .54	Porter Cat. of Prop. mot. N°. 855
„	−0 .042	−0 .50	Stumpe A. N. **125** S. 410.

4153 Die gesonderten Mer. Beob. von Berlin und Pola finden sich nicht in den A. N.

4163 Mikrometer-Anschluss an B. D. + 42°, 2656. Stern äusserst schwach; Decl. geschätzt.

4170 Die Correction +20″ der Decl. in A. N. gründet sich auf die mit Bessel übereinstimmenden Positionen:

Yarnall 6295	$14^h\,57^m\,30^s.60$	$-10°\,32'\,3''.0$	8^m
M_1 10886	30 .24	3 .7	8^m.

4173 Die gesonderten Mer. Beob. von Berlin and Pola finden sich nicht in den A. N. Die Correction der Decl. in A. N. um −20″ folgt aus Yarnall's Position und der Position in Cincinnati Zones N°. 2564 $14^h\,58^m\,50^s.48$ −21° 55′ 0″.4; $7^m.5$.

4178 Die gesonderten Mer. Beob. von Berlin und Pola finden sich nicht in den A. N.

4180 Nach brieflicher Mittheilung ist die Leidener Bestimmung (4181) richtig. Wenn angenommen wird dass die Position in A. N. **72** sich nicht auf das scheinb. sondern auf das mittl. Aeq. bezieht, wird sie für 1875.0

$15^h\,0^m\,16^s.43$ $-2°\,41'\,9''.3$

also ziemlich gut stimmend mit den übrigen Positionen.

4198-99 Dieser Stern zeigt E. B.

4223 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen ist die A. R. der A. N. um -2^s berichtigt.

4260 Lalande 27833—35 hat $15^h10^m46^s.07$ — 10°2′17″5; Santini$_3$ $45^s.82$, 20″.1; $7^m.8$.

4264—65 Dunsink southern stars 547 hat $15^h13^m31^s.55$ — 10°42′30″5; $8^m.7$ also 1′ nördlicher. Vielleicht E. B.

4273 Nach brieflicher Mittheilung von Dr. E. F. v. d. S. Bakhuyzen is die A. R. in A. N. um -2^s corrigirt.

4278 Argelander Oeltzen 15290 giebt $15^h15^m32^s.81$ + 45°23′3″.5; 9^m, also in δ etwa 15″ südlicher als Pulkowa und A. N. Weder in Argelander, Fehlerverzeichniss B. B. V., noch in Weiss Verbesserungen und Berichtigungen zu verschiedenen Sternverzeichnissen, Wiener Annalen Bd. V findet sich diese Correction. Die Reduction aus den Zonen auf 1842.0 ist richtig.

4322 M_1 11465 hat $15^h25^m32^s.09$ — 9°9′28″2; 8^m, M_2 5753 $15^h25^m31^s.88$ — 9°9′36″.2; $7^m.7$.

4332 In A. N. **94** S. 295 findet man unter 177 eine genäherte Position dieses Sterns für 1878.0 ohne Angabe des Beobachtungsortes; sie ist deshalb nicht als eine selbständige Position in dem Cataloge aufgenommen. Die in den Bemerkungen angeführte genaue Position war in Kremsmünster bestimmt worden und ist brieflich von Dr. Knorre mitgetheilt.

4334 Nach Graham Cambridge A. G. Z ist α $15^h29^m25^s37$ δ 27°19′45″.8. Epoche 1884,4 2 Beobachtungen.

Nr.

4338 Nach brieflicher Mittheilung von Dr. Knorre ist δ A. N. um + 9″.3 corrigirt.

4345 Die Declination in den A. N. ist um — 10′ zu verbessern, wie sowohl aus Cordoba G. C. 21233, als aus der Königsberger Beob. der Cybele 14 Mai 1868 (A. N. **74** S. 246) hervorgeht.

4356 Nach Graham Cambr. A. G. Z. $15^h39^m3^s.81 + 26°39'39''.0$ 1888.5 2 Beob.

4364 Nach Graham Cambr. A. G. Z. $15^h43^m12^s.24 + 26°22'51''.8$ 1881.0 4 Beob.

4386 Nach brieflicher Mittheilung sind die Declinationen 1877 Juni 3 und Juni 21 auf 1877.0 reducirt — 23°10′9″.1 und — 23°10′10″.1.

4387 Nach Graham Cambr. A. G. Z. $15^h51^m8^s.55 + 25°32'22''.0$ Epoche 1877.7 4 Beobachtungen.

4393 In Bezug auf die A. N. **105** S. 353 publicirte Position ist nach Rombergs Conjectur, Publ. XVIII A. G. S. 50, angenommen dass der Ort für 1882.0 und nicht für 1880.0 gilt. Unter dieser Annahme ist die Uebereinstimmung mit Pulkowa ziemlich gut. Der Mikr.-Anschluss an B. D. +25° 3006 A. N. **98** S. 287 giebt $15^h\,53^m\,24^s.9 + 25°\,27'.0$.

4418 Nach Auwers Berl. A. G. C. 5752, $42^s.32$, 47″.2 Ep. 1871.4; 2 Beob. E. B. $+0^s.002$ —0″.14.

4421 Die Declination ist bei Palisa 2′ 30″ südlicher als bei Arg. Weiss. Uebereinstimmend mit Argelander findet man in Cincinnati Zones 2704 $16^h\,1^m\,16^s.02$ —20° 25′ 22″.3; $8^m.5$ E. B. in A. R. sehr gering, in Decl. —0″.092. In Gill.-Kapteyn Phot. D. M. findet sich kein Stern dessen Declination mit Palisa stimmt. Palisa schlägt vor seine Beobachtung zu streichen.

4434 Die verglichenen Quellen, Weisse, Lalande 29627, Kam und Bonn A. G. C. erfordern alle die Correction — 1′.

4448 Die auf 1875.0 reducirte Declination des Sterns A. N. **93** S. 167 ist — 17° 39′ 36″.7; wenn man jedoch den Ort des Vergleichsterns aus dem Ort des Cometen und dem mitgetheilten Declinationsunterschiede ableitet, findet man — 17° 40′ 16″.7. Da die in Pola beobachtete Position auf zwei gut stimmenden Beobachtungen beruht, ist wahrscheinlich die Declination von Schmidt in A. N. **93** um + 20″ oder — 20″ zu corrigiren.

4463 Nach einer Mittheilung von Dr. Palisa ist die A.R. um $+0^s.31$ corrigirt; c.f. Publ. XVIII A.G. S. 50.

4466 Der Stern ist auch bestimmt in Dunsink N°. 600 $16^h17^m21^s.11$ — 13° 20′ 38″.4; $8^m.3$. Die Declination von M_2 6080 ist um + 1′ corrigirt, wie Weisse 303, A. N. **84** und **69** und auch die Beobachtung in Dunsink es verlangen. E. B. — $0^s.014$ — 0″.28 nach Porter Cat. of proper motions 931; — $0^s.0140$, — 0″.239 nach Stumpe A. N. **125** S. 411.

4473 In Romberg Pulkowa Cat. von 5634 Sterne, kommt unter 3621 derselbe Stern vor nämlich $16^h22^m7^s.98$ + 61° 58′ 52″.7; 6.3^m Σ 2054 med. In Helsingfors A. G. C. N°. 8811 wird nichts über Duplicität mitgetheilt. Ob die Beobachtung in den A. N. **109** sich auf einen der Componenten bezieht, lässt sich nicht entscheiden. Nach den Pos. med. S. 229 Cat. specialis sind die Componenten $5^m.7$ und $6^m.9$ vicinissimae, im Meridiankreise simplex.

4493 Man findet diesen Stern auch bei Lalande N°. 30046: $16^h\,25^m\,4^s.36$, 20° 28′ 51″.7, bei Tacchini N°. 609: $3^s.81$, 54″.8, bei Yarnall N°. 6941: $3^s.92$, 56″.1.

Nr.

4493 Man findet dieser Stern auch bei Lalande 30046: $16^h25^m\,4^s{,}28$—20° 28′ 53″.1 Ep. 1798.5, bei Tacchini 609: $3^s.81$, 54″,8 Ep. 1868.51, bei Yarnall 6941: $3^s.92$, 56″,1 Ep. 1870.7.

4495 Vielleicht E. B.

4509 Am sechszölligen Refractor hat Herr Pannekoek in 1895 keinen Stern heller als 12^m an dem angezeigten Ort finden können.

4516 Die Richtigkeit der Position ist verbürgt durch die übereinstimmenden Correctionen der Oppositions-Ephemeride von Concordia, wie diese aus der Leidener Meridian-beobachtung A. N. 66 S. 24 und der Leidener Refractor-beobachtung 1865 Mai 16: A. N. 67 S. 26 hervorgeht. September 1895 hat Herr Pannekoek am 6 zölligen Refractor einen Stern 11^{ter} Grösse an dem angezeigten Orte gesehen.

4529 Nach einer Mittheilung von Dr. J. Palisa ist die Declination der A. N. um — 1′ corrigirt; cf. Publ. XVIII A. G. S. 50.

4535 Die Richtigkeit der Correction ist von Dr. Knorre bestätigt; cf. Publ. XVIII A. G.

4537 Die Richtigkeit der Meinung von Dr. Romberg Publ. XVIII S. 50 dass die Epoche 1874 0 statt 1875.0 ist, ist bestätigt durch die Berichtigung von Prof. Weiss A. N. 114 S. 354. Arg. Weiss 12825 hat: $16^h\,40^m\,12^s.64$ —20° 44′ 47″.6; $8^m.0$, Tacchini-Holden 634: $12^s.68$, 50″.2; $8^m.0$.

4556 Die Grösse dieses Sterns ist nach Argelander in den südlichen Zonen zweimal 6—7, einmal 8^m; die südliche D. M. giebt $5^m.5$, Cordoba D. M. $5.^m9$. Vielleicht variabel. Cordoba D. M. 22° 11734 hat $16^h\,49^m\,16^s.1$ —22° 56′.8.

4557 Diese Beobachtung bezieht sich wohl auf Comes austr. praec. Cordoba G. C. 22943, obgleich Duplicität nicht in A. N. erwähnt ist. Arg. Weiss 12945 hat: $16^h\,49^m\,43^s.31$ —19° 20′ 18″.6; 8^m. Arg. Weiss 12946: $43^s.38$, 19″.9; $7^m.0$, Cincinnati zones 2787: $43^s.28$, 23″.8; $7^m.0$. Sowohl Cordoba G. C. als Arg. Weiss und Cincinnati zones, erfordern die Correction der Declination um + 1′.

4562 Dieser Stern findet sich auch Washington Obs. 1876 S. 529 N°. 483; der Ort, auf 3 Beobachtungen beruhend, ist $16^h\,50^m\,44^s.23$ —24° 9′ 22″.8; $10^m.2$. Cordoba D. M. 12977 hat $16^h\,50^m\,42^s.4$,—24° 9′.5; $9^m.7$.

4581 Weisse_1 XVI 1092 B. Z. 246 giebt $16^h59^m20^s.57$, —12°19′ 7″.1.

4597 Lalande 31247 hat $17^h\,4^m\,51^s.51$; 22° 46′ 14″.0, Tacchini 693: $50^s.64$, 12″.3. Die Verbesserung der A. N. um 1^m wird durch die übereinstimmenden Werthe von Lalande, Arg. Weiss und Tacchini angezeigt.

4601 Nach Weisse XVII 59 B. Z. 246 ist der Ort für 1875.0 $17^h\,5^m\,55^s.01$, —12° 37′ 5″.3; 9^m.

4616 Nach Weisse XVII 129 B. Z. 254 ist der Ort für 1875.0 $17^h\,9^m\,30^s.48$, —7° 7′ 30″.8; vielleicht E. B.

4620 Die Correction von Romberg. Publ. XVIII A. G. ist nicht —1^m sondern +1^m, wie hervorgeht aus M_1 13747, Lal. 31393: $17^h\,10^m\,32^s.45$ —10° 42′ 34″.9; $8^m.9$ und B. D. —10° 4467.

4629 Dieser Stern wurde auch, A. N. 88 289. Note, am Washingtoner Mer. Kreis bestimmt $17^h\,14^m\,30^s.86$ —23°26′52″.9. Das Mittel von 6 Positionen in den Wash. Zonen giebt nach derselben Autorität $30^s.60$, 49″.9.

4637 Durch einen Druckfehler findet sich in den A. N. 11^h statt 17^h.

4655 Der Stern findet sich in keinem andern Cataloge; seine Position ist jedoch gesichert durch die Berliner Beobachtung des Planeten Electra 1875 Mai 28 (A. N. 88 35), welche für die Ephemeride-Correction einen mit dem an anderen Tagen bestimmten übereinstimmenden Werth giebt. Pannekoek fand Mai 1895 an der angezeigten Stelle einen schwachen Stern ungefähr $9^m.8$.

Nr.

4657 Leipzig A. G. Z. giebt $17^h\,27^m\,8^s.14 + 10°\,0'\,25''.3$; $8^m.8$ Epoche 1877.25, 4 Beobachtungen. Nach den übrigen Beobachtungen ist die A. R. der A. N. um -1^s corrigirt.

4678 Romberg hat in seinem Cataloge (Publ. XVIII A. G.) die Bemerkung dass Arg. Oeltzen 17177 genau 10' nördlicher steht. Diese Bemerkung ist richtig; dass jedoch die Position von Becker richtig ist folgt aus der Position von Velleda (A. N. 88 35) welche auf die Position dieses Sterns beruht und aus der Cordoba. D. M. — 27° 11915.

4683 Die R. A. der A. N. erfordert die Correction von -1^s wie hervor geht aus den im Catalog angeführten Quellen und aus Glasgow. Cat. II 1551, 7-8m, $17^h\,39^m\,26^s.49, + 5°\,46'\,6''.2$.

4689 Der Correctur A. N. 74 S. 197 zufolge, ist der Ort im Cataloge nach A. N. 74 S. 191 angesetzt. Washington Trans. Z. N°. 30 giebt den Ort $17^h\,40^m\,1^s.85, -25°\,8'\,17''.4$; 9^m.

4700 Yarnall 2d Edit. 7433, identisch mit Yarnall 3d Edit. 7573 giebt den Ort $17^h\,43^m\,28^s.91$, $-35°\,19'\,40''.8$; $8^m.5$.

4704 Durch einen Druckfehler (Sehe die Beob. von Hebe 1881 Mai 27 und 28. A. N. 102 S. 293) ist die Declination in A. N. — 4° statt — 2°.

4720 Nach einer Mittheilung van Prof. J. C. Kapteyn ist es fast unmöglich dass der Unterschied zwischen den A. R. von Engelmann in A. N. und von der Cape P. D. durch einen Fehler in diesem Cataloge zu erklären sei. Vermuthlich ist also die A. R. der A. N. um 5^s fehlerhaft.

4740 Anwers. Berl. A. G. C. 6591 $41^s.28$, 23''.2 Ep. 70.2; 3 Beobachtungen.

4761 Mikrometer-Anschluss an dem Stern A. Z. 124 N°. 138, dessen Position Argelander in B. D. M. Band V, S. XIV berichtigt hat.

4762 Wie 4761, mikrometrisch mit A. Z. 124 N°. 138 verbunden. Die Declination ist unsicher, da Schmidt für den Declinations-Unterschied von 4761 und 4762 den Werth 1'23''.2 angiebt, dagegen für die Declinationen selbst 71° 3' 10''.3 und 71° 1' 38''.0 (1881.0) mit einem Unterschiede von 1' 32''.3.

4771 Die Correction wird bestätigt durch Washington Trans. Zone 51 N°. 35 $18^h\,13^m\,2^s.51$, — 28° 10' 19''.5; 8^m.

4773 A. N. zeigt eine starke Abweichung von Carrington und B. D. Dr. Palisa theilte mit dass die Angabe in A. N. durch irrthümliche Reduction entstellt war. Die von Dr. Palisa verbesserte Position ist in dem Cataloge aufgenommen.

4782 Die A. R. in den A. N. ist um 2^s corrigirt, wie Weisse und Berlin A. G. Z. es verlangen.

4796 Duplex Σ 2318. Nach Mens. Micr. $8^m.0$, $10^m.2$ Entf. 12''.85 Pos. Winkel 257°. In A. N. ist er als simplex beobachtet, also nur der hellere Stern. Seine Position in Struve's Pos. mediae ist $18^h\,20^m\,25^s.19$, 25° 55' 55''.5; $7^m.8$.

4804 Duplex Σ 2321 seq. Nach. Mens. Micr. $7^m.9$, $9^m.5$ Entf. 6''.68 Pos. Winkel 191°. Nach Engelmann A. N. 84 $8^m.5$, 9^m Entf. 7'' Pos. Winkel 185°. Nach Posit. mediae ist seine Position $18^h\,23^m\,36^s.99$, 1° 6' 4''.5. Die von Romberg angezeigte Correction von $+ 10^s$ ist hinreichend gesichert.

Nr.

4807 Vielleicht E. B. Man hat auf 1875.0 reducirt, folgende Positionen:

Lalande 34219	$18^h\,23^m\,56^s.71$	9° 7′ 44″.6	Ep. 1794.46
Weisse 543 Z 176	57.19	37.1	„ 1823.56
Santini VI 240	56.65	33.2	„ 1840.50
Dorpat	56.34	25.1	„ 1881.5
Leipzig A. G. Z	56.23	24.6	„ 1884.56.

4810 Weisse und Bessel um + 30′ corrigirt nach den Posit. emend. und nach E. Luther.

4811 Duplex Σ 2324. Nach Men. micr. $8^m.2$, $8^m.5$ Entf. 2″.43, Pos. Winkel 146°. Engelmann bemerkt in A. N. simpl.? (1″ 0°?); in Albary A. G. C. findet man die Bemerkung: Duplex (med.); magn. 8.8, 8.4; 3″ 120°. Pos. Mediae Mitte $38^s.31$, 28″.5.

4821 Mikrometer-Anschluss von Herrn Wilterdink an Arg.-Oeltzen 18352 = Helsingfors A. G. C. 9838 1892 Oct. 19.

4834 Duplex Σ 2365. Nach Engelmann A. N. $8^m.3$ $9^m.7$ Entfernung 20″, Positionswinkel 50°. Helsingfors A. G. C. erwähnt keine Duplicität, Pulk. Cat. 1875.0 4075 hat praec. austr. maj. $8^m.2$ $18^h\,34^m\,19^s.18$ 63° 36′ 0″.3. Pos. mediae 2135 hat Simplex $8^m.0$ $19^s.46$, 36′ 10″.2. E. B. nach Argelander — $0^s.0074$, — 0″.302.

4836 Duplex Σ 2371. Nach Mensurae micr. $8^m.5$, $8^m.5$. Entfernung 9″.55 Pos. Winkel 55°.5, 1830; nach Engelmann A. N. 84 $8^m.5$ $8^m.7$ Entf. 16″. Pos. Winkel 255°. Die A. R. von Engelmann bezieht sich auf die Mitte; die Position in den Pos. mediae auf austr. pracc.; $9^m.0$.

4837 Nach M_1 17228 $18^h\,37^m\,28^s.94$ — 2° 11′ 21″.5; 9^m, nach M_2 7762, $27^s.47$, 31″6; $8^m.5$ 3 Beob. In M_1 findet man die Bemerkung: stimmt schlecht mit M_2.

4839 Duplex Σ 2374. Nach Mens. micr. $8^m.8$, $9^m.2$ Entf. 15″.47, Pos. Winkel 36°. Nach Engelmann A. N. 84 $9^m.2$. Entf. 15″, Pos. Winkel 35°. Die Position in den Pos. mediae bezieht sich auf austr. pracc. $8^m.8$.

4841 A. N. 94 S. 205 und A. N. 93 S. 201 haben dieselbe A. R., aber die Decl. von A. N. 94 ist 19″.2 südlicher. Die in A. N. 94 S. 203 mitgetheilte Wiener Beobachtung von Tolosa 1878 Juni 25 ist richtig reducirt mit der 1878.59 beobachteten Position des Vergleichsterns, so wie dieselbe A. N. 94 für 1878.0 ist mitgetheilt. Die daraus A. N. 93 abgeleitete Position für 1875.0 ist jedoch fehlerhaft, 1° da die A. N. 93 mitgetheilte Präcession, $3 \times 2''.86$, mit dem falschen Zeichen angebracht ist, 2° da die jährliche Präcession selbst nicht + 2″.86 sondern + 3″52 ist. Wenn man nun mit dem richtigen Werth und dem richtigen Zeichen der Präcession die Position von A. N. 94 auf 1875.0 reducirt, bekommt man die in diesem Cataloge angezeigte A. R. und Decl., übereinstimmend mit Gill.-Kapteyn Phot. D. M.

4842 Duplex Σ 2386. Nach Engelmann A. N. 84 $9^m.1$ Entf. 20″, Posit. Winkel 30°. Struve Pos. mediae 2154 hat austr. $8^m.7$, $18^h\,40^m\,47^s.15$ + 35° 34′ 35″.9.

4850 Duplex Σ 2404. Nach Mens. micr. $6^m.0$, $7^m.5$ Entf. 3″54, Pos. Winkel 183°; nach Engelmann A. N. 84 $7^m.7$, $8^m.2$ Entf. 2″, Pos. Winkel 185°. In Pos. mediae 2170 hat man: bor. $7^m.0$, $52^s.82$, 54″.8.

4851 Die Correction von — 1′ wird bestätigt durch Cordoba. Z. C. 2524: 8^m, $18^h\,45^m\,17^s.27$, — 27° 54′ 18″.8 und Tacchini-Holden 881 8^m. $18^h\,45^m\,17^s.18$, — 27° 54′ 21″.4.

Nr.

4852 Nach Graham Cambr. A. G. C. $18^h\,45^m\,41^s.88 + 28°\,22'\,48''.2$ Ep. 1875.2 5 Beob.

4853 Duplex Σ 2408. Nach Mens. micr. $7^m.5$, $8^m.7$ Entf. 2″.30, Pos. Winkel 97°. Nach Engelmann A. N. 94 $8^m.0$ $8^m.8$ Entf. 1″.5, Pos. Winkel 90°. In Pulk. Cat. 1875.0 gilt der Ort für praec. bor. major. Pos. mediae 2177 hat simplex $7^m.5, 4^s.75, 57''.1$.

4856 Nach brieflicher Mittheilung von Dr. Holetschek ist die Decl. um + 3′ corrigirt.

4861 Melbourne Cat. II 944 hat $18^h\,49^m\,39^s.82$, —27° 36′ 55″.3; $8^m.0$.

4876 Duplex Σ 2435. Nach Mens. micr. $8^m.5$ $11^m.5$ Entf. 10″.26, Pos. Winkel 12°. Engelmann A. N. 84 hat zwei Beob. Im Catalog ist das Mittel beider Beobachtungen aufgenommen. Pos. mediae 2203 hat: simplex $9^m.0$ $44^s.68$, 11″.4. In Pulk Cat. 1875.0 ist N°. 4140 fehlerhaft als Σ 2435 bezeichnet; 4140 ist B. D. 8°, 3948, dagegen ist 4137 identisch mit Σ 2435; die Position ist $18^h55^m44^s.63$ 8°34′11″.8.

4878 Duplex Σ 2436. Nach Mens. micr. $7^m.4$ $8^m.1$ Entf. 34″.58, Pos. Winkel 309°. Nach Engelmann A. N. 84 bei zwei Beob. $8^m.7$ $8^m.8$ und $8^m.5$ $8^m.8$ Entf. 35″, Pos. Winkel 310°. Im Catalog findet man das Mittel beider Bestimmungen. In Pulkowa Cat. 1875.0 ist 4143, Σ 2436 seq. $9^s.99$, 31″.7; 4142 ist Σ 2436 pr. $8^h56^m8^s.41$, 8°34′53″.0.

4883 Die Correction von Romberg Publ. XVIII wird auch durch Arg. Oeltzen 18856 bestätigt.

4894 Duplex Σ 2465. Nach Mens. micr. $8^m.3$, $10^m.2$ Entf. 1″.21, Pos Winkel 250°. Von Engelmann zweimal als simplex beobachtet. Pos. mediae hat 2236 simplex $8^m.5$ $19^h2^m56^s.69$, 30°28′38″.8.

4895 Die A. R. in A. N. 102 nach der erste der drei Positionen in A. N. 110 195 ist um — 1^s corrigirt.

4899 Duplex Σ 2470. Nach Mens. micr. $6^m.7$, $8^m.2$ Entf. 12″.90, Pos. Winkel 272°. Nach Engelmann Entf. 15″, Pos. Winkel 290, Grössen fehlen. Pos. mediae 2243 hat seq. $8^m.1$ $19^h\,4^m\,11^s.72$ + 34°33′41″.4.

4900 Duplex Σ 2472. Nach Mens. micr. $7^m.5$ $9^m.2$, Entf. 17″.14, Pos. Winkel 337°. Nach Engelmann $8^m.5$, $9^m.5$ Entf. 17″, Pos. Winkel 330°. Pos. mediae hat 2244 simplex 8.3, $19^h\,4^m\,13^s.71$, 37° 42′ 46″.0.

4904 Dieser Stern ist statt eines Vergleichsterns 11^{er} Grösse für Komet 1847 IV in Pulkowa beobachtet. Obgleich von Dr. Romberg Publ. XVIII A. G. S. 52 Zusatz als neu bezeichnet, kommt der Stern vor in Obs. du Poulkowa Vol. VIII in dem Catalogue des étoiles observées occasionellement.

4905 Leipzig A. G. Z. $8^m.6$, $19^h\,6^m\,41^s.95 + 12°\,30'\,37''.6$ Ep. 1883.96 3 Beob.

4908 Duplex Σ 2482. Nach Mens. micr. $8^m.5$, $9^m.8$ Entf. 2″.02, Pos. Winkel 351°. Nach Engelmann $8^m.5$ simpl. In den Pos. mediae ist sie auch als simplex bezeichnet.

4917 Die Correction gründet sich nicht nur auf Arg. Weiss 15218, sondern auch auf die entsprechende Planeten-Beobachtung von Massilia in Durham am 21 und 22 Juli 1870. A. N. 77 365.

Nr.

4919 Man findet weiter $Weisse_1$ XIX 278 $19^h13^m7^s.63 - 0°44'1''.6$. Pulk Obs. Vol. VIII pag. 346 N°. 1111 $6^s.65$, 10″.4 Brüssel Catalog 8058 6″.42, 12″.5. Die Positionen der verschiedenen Catalogen mit Ausnahme von Weisse stimmen recht gut. Die Position ist von Weisse richtig aus Bessels Zonen abgeleitet, aber Luther, Astron. Beob. in Königsberg 37e Abtheilung, 1 Theil S. 1, corrigirt Bessels Zone in Declination um + 10″ ohne dafür eine Grund anzugeben. Wenn man diesse Correction nicht anbringt, stimmt Weisse's Decl. — 3° 44′ 11″6 gut mit den übrigen Werthen. Vermuthlich ist deshalb die Decl. von Bessel ungeändert zu behalten, seine R. A. jedoch um -1^s zu corrigiren.

4924 Duplex Σ 2502. Nach Mens. micr. $8^m.2$ $10^m.2$, Entf. 1″.83, Pos. Winkel 206°. Nach Engelmann A. N. 84 7.8 simpl. Pos. Mediae 2276 giebt simpl. 7.5, $19^h14^m42^s62$, 39°2′18″.5.

4925 Bei B. D. + 14° 3881 ist der Buchstabe K durch L zu ersetzen. In M_2 ist die Decl. nur geschätzt Leipzig A. G. Z. hat $8^m.2$ $19^h14^m57^s.00 + 14°11'13''.7$ Ep. 1871.13 2 Beob. röthlich.

4926 Epoche der Beob. in Pulk. Obs. Vol. VIII 1848.79.

4930 M_1 19861 giebt den Ort $19^h16^m4^s92 + 14°18'30''.1$, aber die Grösse 8.9. Lalande hat die Grösse 8, so wie auch der Cat. der Akad. Sternkarten.

4946 Duplex Σ 2532. Nach Mens. micr. $6^m.0$ $10^m.2$, Entf. 34″.90, Pos. Winkel 5° Nach Engelmann A. N. 84 $6^m.7$ $9^m.3$ Entf. 33″, Pos. Winkel 10°. Pos. mediae 2308 hat: maj. $6^m.0$, 19^h 23^m $53^s.93$, 2° 38′ 46″.7.

4960 Duplex Σ 2541. Nach Mens. micr. $8^m.2$ $9^m.8$, Entf. 2″.84, Pos. Winkel 340°. Nach Engelmann 8.5 simplex. Pos. mediae 2316 hat seq. 9.0 $19^h29^m56^s.37 - 10°42'21''.1$. Pulkowa Cat. 1875.0 giebt den Ort für seq. austr. major. E. B. nach Pulkowa Cat. und Bischof $-0^s.0179$ — 0″.261; nach Stumpe A. N. 125 414 $-0^s.0195$ — 0″.265, nach Porter N°. 1086 $-0^s.020$ — 0″.30.

4966 Rümker 7692 6^m, $19^h31^m51^s.48 + 18°41'50''.5$. Durch briefliche Mittheilung von Dr. Holetschek wird die Correction von + 1′ bestätigt.

4967 Duplex Σ 2545. Nach Mens. micr. $6^m.2$ $8^m.1$, Entf. 3″.53, Pos. Winkel 315°. Nach Engelmann A. N. 84 7^m, 9^m, Entf. 2″, Pos. Winkel 310°. Pos. mediae 2322 hat major $6^m.2$ 19^h 31^m $51^s.66$ — 10° 26′ 9″.6.

4968 Duplex Σ 2547. Nach Mens. micr. $7^m.7$ $9^m.0$, Entf. 20″.70, Pos. Winkel 332°. Nach Engelmann A. N. 84 $8^m.7$ $9^m.2$ Pos. Winkel 350°. Pos. mediae 2324 hat austr. seq. $8^m.0$ 19^h 32^m $4^s.16$ — 10°37′12″.2.

4982 Die Beobachtung am Wiener Mittagsfernrohr angestellt ist nach brieflicher Mittheilung von Dr. Holetschek sehr unsicher wegen Schwäche des Objects.

4990 Der Stern findet sich auch in Wash. Transit Zones 52 N°. 29: $19^h40^m8^s.79 - 28°2'12''.5$ und Mural Zones 128 N°. 59: $19^h40^m8^s.80$ — 28°2′12″.8, wenn letztere A. R. um 2^m vergrössert ist.

4997 Duplex Σ 2576. Nach Mens. micr. $7^m.8$, $7^m.8$, Entf. 3″.60, Pos. Winkel 319°. Nach Engelmann A. N. 84 $8^m.6$ $8^m.6$, Entf. 2″.5, Pos Winkel 120°. In Leiden ist die Mitte beobachtet. In Leipzig praec, Pulk. Cat. 1875.0 4338 und 4339 giebt beide Componenten $8^m.5$, 19^h 40^m $48^s.49 + 33°$ 18′ 52″.5, $8^m.6$, 19^h 40^m $48^s.74 + 33°$ 18′ 49″.6. Positiones mediae giebt 2355 Med. $8^m.3$ et $8^m.5$ $19^h40^m48^s.51$ 33° 19′ 13″.6. E. B. nach Argelander $+ 0^s.0043$ — 0″470, nach Stumpe A. N. 125 $+ 0^s.0028$ — 0″.473, nach Porter 1091 $+ 0^s.002$ — 0″.47.

Nr.

4998 Nach Auwers Berl. A. G. C. 7675 $8^s.77$, $51''.9$ Ep. 1869.6, 2 Beob.

5000 Duplex Σ 2580. Nach Mens. micr. $5^m.0$, $7^m.0$, Entf. $25''.80$, Pos. Winkel 73°. Nach Engelmann 5^m $8^m.7$ Entf. $21''$ Pos. Winkel 60°. Pulk. Cat. 1875.0 hat für prace. $5^m.4$ $19^h\,41^m\,40^s.93 + 33°\,26'\,16''.5$. Pos. mediae hat 2359 17 Cygni prace. $4^m.5$ $19^h\,41^m\,40^s.88$, $33°\,26'\,36''.7$. E. B. nach Pulkowa $-0^s.0010 - 0''.434$, nach Stumpe $-0^s.0010 - 0''.432$, nach Porter $0^s.000 - 0''.47$.

5055 Die Correction A. N. 86 S. 320 für den Stern N°. 83 ist statt $-1^s + 1^s$ zu lesen. Die Bestimmungen A. N. 85 S. 201 N°. 83 und A. N. 86 S. 314 N°. 43 beziehen sich auf demselben Object.

5060 Die A. R. ist um -1^m, die Decl. um $-1'$ corrigirt. Diese Correctionen gründen sich 1° auf die Uebereinstimmung mit B. D. — 19° 5709, dessen Ort für 1875.0 $19^h\,59^m\,43^s.8$ — 19° 8'.9 ist, 2° auf die Uebereinstimmung mit Gll.-Kapteyn Phot. Durchm., 3° auf eine Vergleichung am Himmel von Dr. Kam 1893 Aug. 12 in Leiden. Durch Mikr.-Anschluss an B. D. — 19°, 5721 wurde gefunden $19^h59^m42^s.0$ — 19° 8'.7.

5065 Durch Mikrom-Anschluss an B. D. 14°, 4175 $9^m.3$ von Dr. Kam 1892 Aug. 11. Das Object war äusserst schwach, Decl. geschätzt.

5073 Nach Auwers Berl. A. G. C. 7966 $48^s.48$, $25''.8$ Ep. 1870.7 2 Beob. E. B. $+0^s.0008 + 0''.018$. Weisse—Bessel um $+10''.3$ zu corrigiren. Siehe auch Lalande, Piazzi, Taylor.

5078 Duplex Σ 2640. Nach Mens. micr. $6^m.0$ $9^m.9$, Entf. $4''.93$, Pos. Winkel 27°. Nach Engelmann A. N. 84 $7^m.0$ simplex. A. R. um $+3^s$ corrigirt wie Struve Pos. med. und Helsingfors A. G. C. 11093 $6^m.1$ $10^s.15$, $51''.4$ es verlangen. Helsingfors Z. 612 bemerkt: duplex $4''$ Comes $9^m.3$.

5081 Duplex Σ 2642. Nach Mens. micr. $8^m.7$ $8^m.7$, Entf. $2''.45$, Pos. Winkel 165°. Nach Engelmann A. N. 84 $8^m.7$ $8^m.8$ Entf. $2''$, Pos. Winkel 170°. Nach den verschiedenen Quellen ist die A. R. der A. N. um $+1^m$ corrigirt. In Pulkowa ist die Mitte, beobachtet; Helsingfors A. G. C. hat $54^s.40$, $23''.4$ med. und bemerkt: Dupl. $2''$ med. $8^m.8$ und $8^m.8$. Pos. mediae 2426 hat med. $8^m.7$ et $8^m.7$ $20^h3^m52^s.95 + 63°20'16''.3$. E. B. nach Bonn VII $+0^s.0301 + 0''.159$, nach Pulk. Cat. identisch mit Bonn, nach Porter Prop. Mot. $1118 + 0^s.032 + 0''.15$.

5086 Duplex Σ 2636. Nach Mens. micr. $8^m.2$ $9^m.2$, Entf. $12''.51$, Pos. Winkel 202°. Die Positionen in dem Catalog und in den Pos. med. beziehen sich auf prace. Der A. N. 76 S. 53 angeführte Ort bezieht sich auf die Mitte des Sternpaares abgeleitet aus den am Meridiankreis bestimmten Ort des prace. und die Entfernung der Componenten durch Mädler bestimmt.

5095 Obwohl die Berliner Position auf nur eine Beobachtung beruht scheint sie doch durch die Uebereinstimmung mit B. D. genügend gesichert.

5109 Durch Mikrometer-Anschluss an B. D. + 0° 4451 in 1892 October. Das Object wurde schwächer als 10^{er} Grösse geschätzt.

5115 Die Declination der A. N. um $-10''$ corrigirt, wie es durch die verglichenen Quellen wird angezeigt.

5119 Der Stern ist o^2 Cygni, die A. R. in den A. N. ist auf Grund der verglichenen Quellen um 1^s vergrössert. Epoche der Decl. Beob. 1872.81.

5133 Die Grösse dieses Sterns, welche in den Washington M. C. Zones nicht angegeben worden ist, ist $9^m.0$ nach Cordoba D. M. — 24° 15987 $20^h\,13^m\,50^s.8$, — 24°5',0.

Nr.

5141 Leipzig A. G. Z. $20^h14^m21^s.40 + 12°17'30''.8$; $8^m.8$, Epoche 1890.52, 2 Beobachtungen.

5160 Σ 2673. In A. N. bemerkt Engelmann: beob. sequens amstralis Δ 2″, Positionswinkel 330°. Struve Pos. med. bemerkt simplex.

5179 Die Declination in A. N. um + 10″ corrigirt, wie die verglichenen Quellen erfordern.

5197 Der Ort A. N. **68** 380 ist fehlerhaft. Er ist berichtigt in A. N. **69** 7 und **73** 64.

5217 Durch Anschluss an B. D. — 2°, 5286 = Schjellerup 8069 von Kam 1892 Aug. 13 in Leiden mikrometrisch bestimmt.

5219 Romberg's Correction — 1′ in Publ. XVIII der A. G. wird durch die verglichenen Quellen bestätigt.

5221 Leipzig A. G. Z. $20^h\,24^m\,46^s.73 + 14°\,10'\,1''.3$; $8^m.2$, Ep. 71.14, 2 Beobachtungen.

5251 Die von Romberg (Publ. A. G. XVIII) angezeigte Correction ist brieflich von Knorre bestätigt.

5253 Der Stern ist identisch mit Kam 4079. Durch einen Reductionsfehler ist die Decl. A. N. 61 S. 276 statt 13° 0′ 15″.4 12° 59′ 47″.7 zu lesen. Die Position ist dann 1855.0: $20^h\,27^m\,59^s.45$, 12° 58′ 10″.6 und 1875.0: $20^h\,28^m\,55^s.97$, 13° 2′ 13″.3.

5267 Grösse nach Berliner Beobachtung 7.8, nach B. D. 5.3 nach Cordoba G. C. 5.6.

5272 Leipzig A. G. Z. $20^h\,33^m\,2^s.02 + 7°\,22'\,14''.0$; $8^m.3$, Epoche 1886.75, 2 Beobachtungen.

5306 Die Correction von — 1^m ist an die A. R. angebracht worden nach Rombergs's Bemerkung (Publ. A. G. XVIII) dass in diesem Falle die Position stimmt mit B. D. — 11° 5416. Nach brieflicher Mittheilung von Prof Knorre lässt sich aus den Beobachtungsjournalen nichts über diese Correctur entscheiden. In Leiden fand Pannekoek kein Stern an der in den A. N. angezeigten Stelle, jedoch ein Object in derselben Declination, 1 Minute vorangehend. Die Correction wird dadurch bestätigt.

5307 Die Correction von Romberg (Publ. A. G. XVIII) angezeigt ist durch briefliche Mittheilnng von Prof. Knorre bestätigt.

5311 In A. N. wird bemerkt Σ 2725 Comes $8^m.5$ Δ 4″.5 Positionswinkel 0°. Die Position der borealis in Pulkowa Cat. 1875.0 N°. 4662 ist $20^h\,40^m\,23^s.88 + 15°\,27'\,6''.1$; $8^m.5$. Hieraus geht hervor dass in Leipzig der australis beobachtet ist.

5321 Die van Romberg (Publ. A. G. XVIII) angezeigte Correctur wird durch B. D. + 48°, 3210 und Bonn A. G. C. 14676 bestätigt.

5322 Durch Mikrometer-Anschluss an B. D. — 17°, 6099 in Leiden von Kam bestimmt 1892 Aug. 13. Wegen Schwäche des Objects ist die Decl. nur geschätzt.

5325 Durch Mikrometer-Anschluss an B. D. — 8°, 5495 = Weisse 1116 von Kam in Leiden 1892 Aug. 13 bestimmt.

5347 Cordoba D. M. — 25°, 15127 giebt $20^h\,48^m\,47^s.3 — 25°\,40'.4$; $8^m.7$. Dieser Stern kommt weder in Cordoba. G. C. noch in Cordoba Z. C. vor.

Nr.

5358 Durch Mikrometer-Anschluss an B. D. + 1°,4399 = Albany A. G. C. 7341 von Pannekoek in Leiden 1896 Jan. 9 genähert bestimmt.

5369 In A. N. wird bei der ersten Beob. bemerkt Σ 2740 Comes $9^m.7$ Δ 2″.5, Positionswinkel 350°; bei der zweiten Beob.: Comes $10^m.0$ Δ 3″, Positionswinkel 320°? Helsingfors erwähnt keine Duplicität.

5375 Nach Porter Prop. Mot. 1163 ist E. B. $-0^s.010 - 0''.16$.

5377 In A. N. wird bemerkt Σ 2746 Comes $8^m.5$ Δ 1″.3, Pos. Winkel 300°. In Pulkowa Catalog 4755 ist medium beobachtet.

5391 In A. N. werden als Mittel van Leipzig und Berlin dieselbe Werthe als die Berliner Position (5392) angegeben. Pannekoek in Leiden schätzte der Stern 10-11.

5402 A. N. um $-0^s.19$ und $-2''.6$ corrigirt nach brieflicher Mittheilung von Dr. Knorre.

5407 An der in A. N. angezeigte Stelle konnte Pannekoek in Leiden 1899 Juli keinen Stern finden.

5408 Nach brieflicher Mittheilung von Dr. Knorre ist der Ort in A. N. um $-0^s.19$ und $-2''.7$ corrigirt.

5410 A. N. $-0^s.20$ und $-3''.4$ corrigirt nach brieflicher Mittheilung von Dr. Knorre.

5419 Nach Graham Cambridge (Engl.) A. G. Z. $21^h\,4^m\,30^s.04 + 25°\,47'\,12''.3$ Epoche 1876.0, 4 Beobachtungen.

5423 A. N. um $-0^s.19$ und $-2''.6$ corrigirt nach brieflicher Mittheilung von Dr. Knorre.

5425 Σ 2772. Nach den Bemerkungen in A. N. ist in den beiden Beobachtungen in Leipzig die Grösse des Begleiters $9^m.0$ und 9.6, die Entfernung 7″ und 6″, der Positionswinkel 240° und 245° geschätzt. In den Pos. mediae wird die Position von borealis seq. gegeben.

5426 Σ 2773. Nach den Bemerkungen in A. N. ist die Grösse des Begleiters $8^m.7$, die Entfernung 2″, der Positionswinkel 120°. Nach Romberg's Note (Publ. A. G. XVIII) ist die A. R. um $+22^s$ corrigirt.

5450 Prof. Kapteyn glaubt dass der Unterscheid zwischen A. N. und Phot. D. M. nicht durch einen Fehler in der Phot. D. M. erklärt werden kann.

5457 Durch Mikrometer-Anschluss an B. D. + 12°, 4586 = Weisse$_1$ 178 von Kam in Leiden 1892 Aug. bestimmt.

5466 M_1 27952 giebt 1875.0: $21^h\,12^m\,16^s.90 - 2°\,40'\,32''.9$; die Decl. des Münchener Catalogs ist also um + 1′ zu corrigiren.

5497 Die verschiedenen Quellen erfordern eine Correction der Königsberger Decl. um − 10″; diese Berichtigung, durch eine briefliche Mittheilung von Dr. Knorre bestätigt, ist an die Beobachtung angebracht.

5508 Die A. R. ist um -8^s corrigirt nach Romberg's Bemerkung (Publ. A. G. XVIII); die A. R. von M_2 11586 ist $0^s.88$ kleiner.

5525 Nach A. N. 86 384 ist die A. R. um $+10^m$ corrigirt.

5527 Die neue Reduction der Leidener Beobachtung ergab die Declination 7″.2 nördlicher.

Nr.

5547 Die Correction von + 1′ wird bestätigt durch Yarnall 9652 $20^h\,24^m\,47^s.40 - 9°\,17'\,28''.1$; $9^m.8$, durch M_1 28640 $20^h\,24^m\,47^s.33 - 9°\,17'\,27''.2$; 10^m, und durch eine briefliche Mittheilung von Dr. Knorre.

5593 Die verglichenen Quellen scheinen für die Decl. von Arg. Weiss 16937 eine Correction von — 10″ zu erfordern.

5596 Σ 2813. Die Leipziger Beob. giebt für die Helligkeit der Comes $8^m.6$, die Entfernung 7″, Pos.winkel 280°; Helsingfors A.G.C. hat für praec. $11^s.02$, 40″.3; Pulkowa Cat. 1875.0 4919 hat für seq. $12^s.39$ 39″.5; $9^m.0$.

5603 B. B. VI hat $21^h\,33^m\,51^s.25 - 7°\,32'\,23''.3$, 2 Beob. Die Leidener Meridianbeobachtungen, deren Reduction fehlerfrei ist, und die Karlsruher Beob. erfordern für B. B. VI eine Correction von — 2^s.

5605 Σ 2816. Nach A. N. Triplex (in Wolken beob.).

5613 In A. N. bemerkt Engelmann bei beiden Beobachtungen: Helligkeit Comes $8^m.2$ und $8^m.5$; Entfernung (15″) und 9″, Positionswinkel 70° und 60°, blass und röthlich. Helsingfors A. G. C. seq. hat $21^h\,36^m\,30^s.25 + 57°\,0'\,59''.7$; $8^m.7$.

5622 B. B. VI S. 333 hat $21^h\,38^m\,30^s.85 - 14°\,14'\,53''.1$. Die genäherte Decl. von Romberg in Publ. A. G. XVIII ist fehlerhaft; für 1855,0 ist sie anstatt — 14° 37′.4, — 14° 20′.4.

5624 Die Declination in A. N. 67 ist abgeleitet aus Weisse und Lalande, die A. R. ist abgeleitet aus der Beobachtung von Wagner am grossen Ertel'schen Passageninstrumente und den Werthen in den Catalogen von Weisse und Lalande. $Weisse_1$ 906 B. Z. 117 und 119 giebt $21^h\,38^m\,41^s.01 - 14°\,12'\,56''.4$.

5632 Eine Position dieses Sterns in Washington beobachtet, A. N. 81 107, ist nicht in diesem Catalog aufgenommen, da sie sich in Yarnall's Catalog 9782 vorfindet.

5634 Der Stern ist auch durch Mikrometer-Anschluss an B. D. 4778 von Kam 12 Aug. 1892 in Leiden bestimmt; diese genäherte Position ist $21^h\,20^m\,42^s.1 + 0°\,46'.6$.

5637 Die Position in B. B. VI Ep. 1853.82 weicht in A. R. $2^s.58$, in Decl. 8″.9 von der Position in A. N. ab. B. D. 4542 giebt $21^h\,41^m\,59^s.1 + 1°\,15'.2$, also in Uebereinstimmung mit A. N.

5642 Cambr. (Eng.) A. G. C. 12907 hat $28^s.68$, 55″.5, 7 Beob.

5645 Durch Mikrometer-Anschluss an B. D. + 1° 4546, 5647 dieses Catalogs, von Wilterdink 1892 Oct. 12 bestimmt.

5654 Σ 2830. Engelmann bemerkt in A.N. „in Wolken". Albany A.G.C. erwähnt keine Duplicität. Struve Cat. Gen. hat Simplex 8.0, $21^h\,44^m\,50^s.88$, 2° 31′ 22″.1 rej.

5664 Cambridge (Engl.) A. G. C. 12983 $21^h\,48^m\,34^s.02 + 29°\,23'\,26''.5$, Epoche 1884.1, 3 Beob.

5675-77 Albany und Glasgow erwähnen keine Duplicität. Göttingen hat duplex sequens.

5678 In Dorpat Vol. XVII Seite (30) ist in der Col. Var. annua statt $0^s.7300 + 0^s.7275$ und in der Col. M. Decl. 1875.0 statt 72°, 73° zu lesen.

5683 Dieser Stern ist nicht identisch mit B. D. + 29°, 4548. Beide Sterne befinden sich in Cambridge (Engl). A. G. C.

Nr.

5692 Cambrigde (Engl.) A. G. C. hat $21^h\,53^m\,37^s.66 + 29°\,56'\,4''.4$. 3 Beob.

5708 Nach brieflicher Mittheilung von Dr. J. Palisa soll die Position in den A. N. statt $21^h\,59^m\,22^s.07$ $-13°\,37'\,18''.2$ heissen: $21^h\,57^m\,22^s.05 - 13°\,37'\,28''.0$, wie in diesem Cataloge angenommen ist. Dr. Palisa bemerkt hierbei dass die Grösse unterschätzt ist, und die Möglichkeit nicht ausgeschlossen ist, dass die Secunden der Declination nach der ursprünglichen Leseart in den A.N. nämlich 18″.0 seien. Der Stern findet sich auch Lalande 42999, Weisse 1300.

5716 Nach Berl. A. G. C. 9017 $24^s.09$, 49″.5. Epoche 1870.2. 2 Beob. E. B. $+ 0^s.0130 - 0''.122$.

5724 Nach brieflicher Mittheilung von Dr. J. Palisa ist statt $21^h\,59^m\,40^s.58 - 13°\,11'\,40''.2$ zu lesen $21^h\,59^m\,40^s.57 - 13°\,21'\,40''.9$.

5733 Nach Romberg's Note, Publ. XVIII A. G., hat B. D. — 3°, 5387 bei passender Decl. eine A. R. 23^s grösser als der Stern in A. N. Wilterdink in Leiden fand einen Stern (nicht in B. D. vorkommend) welcher auf gleicher Declination die Position in A. N. um 15^s vorangeht. Dr. Peter in Leipzig fand in den Tagebüchern dass die Beobachtung dem Planeten Asia angehört. Dieser Nummer ist also zu streichen.

5734 An dem in den A. N. angezeigten Orte findet sich kein Stern dieser Grösse. Wird jedoch die A. R. um $+ 1^m$ corrigirt, so stimmt der Ort mit Cordoba G. C., M_1 30278 $2^s.87$, 38″.2; 8^m, Weisse_1 1246 B. Z. 117 und 119 $3^s.33$, 39″.3; 7^m, Santini_4 2072 $2^s.88$, 38″.9; 7^m.

5736 Der Ort in A. N. ist das Mittel der Positionen von Rümker A. N. 35 255, Bessel und Washington, A. N. 81. 176, und Meridianbeobachtung in Kremsmünster. Siehe auch Kam 4422.

5738 Rombergs Correction von — 1°, Publ. A. G. XVIII, wird durch briefliche Mittheilung von Dr. Holetschek bestätigt. Die Beob. ist jedoch wegen Schwäche des Objects wenig sicher. Auwers Berlin A. G. C. 9048 hat $11^s.47$, 8″.9; Epoche 1870.5, 3 Beobachtungen.

5750 Dieser Stern fehlt nach Romberg Publ. A. G. XVIII S. 52 in dem Pulkowaer Cataloge und soll identisch sein mit B. D. 1727; diese Angabe ist fehlerhaft; anstatt 1727 ist 1726 zu lesen. Ferner findet man in Catalogue des étoiles observées occasionellement Pulk. Obs. Vol. VIII N°. 1283 ein Stern dessen Position $22^h\,5^m\,48^s.61 + 65°\,41'\,29''.5$; $8^m.4$, ganz übereinstimmend mit Christiania A. G. C. 3534, aber in Declination 1′ von A. N. 88 abweichend. Vermuthlich ist also A. N. 88 und Romberg Publ. A. G. XVIII S. 52 um + 1′ zu corrigiren. Diese Correctur ist in diesem Cataloge angebracht, und wenn sie richtig ist, ist N°. 5750, als identisch mit einem im Cat. des étoiles observées occasionellement, zu streichen.

5756 A. N. bemerkt Σ 2876. Begleiter $9^m.0$, Entfernung 8″, Positionswinkel 55°.

5759 Die von Romberg angegebene Correctur, Publ. XVIII der A. G., wird von den verglichenen Quellen bestätigt.

5772 A. N. bemerkt bei der ersten Beob. Begl. $9^m.0$ Entf. 3″, Positionswinkel 135°, bei der zweiten, Begl. $9^m.2$ Entf. 1″.5, Positionswinkel 300°? Struve, Mens. Micr. hat Σ 2882 Entf. 3″.22 Pos. winkel 326° Lund A. G. Z. gilt für med. Pos. Med. hat 2687 med. 9.3 und 9.5 $22^h\,8^m\,49^s.65 + 37°\,7'\,34''.4$.

5798 Die Correction der Decl. um 1′ wird auch erfordert von Göttingen Cat. I 6174—5, $22^h\,13^m\,13^s.35$ $-1°\,13'\,26''.4$; $8^m.8$.

Nr.

5818 Leipzig A. G. C. 11251 hat $22^h\,17^m\,18^s.33 + 8°\,39'\,45''.3$; $8^m.5$ Ep. 87.3, Argelander Verzeichniss zur Berliner Karte Hora XXII N°. 18 giebt für 1875.0 $22^h\,17^m\,18^s.16 + 8°\,39'.5$ (δ genähert). Aus den verschiedenen Quellen geht hervor, dass A. R. von Weisse um -1^s zu corrigiren ist.

5827 Nach brieflicher Mittheilung von Dr. J. Palisa ist A. N. um -1^m und $+5'$ corrigirt.

5839 Mikrometer-Anschluss von Herrn Wilterdink Oct. 1892 in Leiden an B. D. 4834 = Pulk. Cat. 1875.0 N°. 5157.

5841 Mikrometer-Anschluss von Herrn Wilterdink Oct. 1892 in Leiden an B. D. $+33°$, 4500 = Weisse_2 XXII 413 B. Z. 377.

5851 Mikrometer-Anschluss an B. D. $+33°$, 4500 = Weisse_2 XXII 413, B. Z. 377 von Wilterdink in Leiden Oct. 1892.

5877 Die A. R. in A. N. 111 S. 292 ist $6^s.84$ zu klein, wie sich ergiebt aus der Vergleichung mit der Wiener Beobachtung des Planeten (238) am 24 Aug. 1884 mit der Ephemeride im Berliner Circular N°. 233. A. N. 112 257 stimmt in Decl. genau mit A. N. 72 doch ist in A. R. $0^s.03$ grösser.

5937 Romberg's Correctur der Decl. um $-1'$, Publ. A. G. XVIII, wird durch die Leidener Mer. Beobachtung und durch die anderen Quellen bestätigt.

5940 Die verglichenen Quellen und M_1 31572 $22^h\,41^m\,54^s.68 - 8°\,5'\,34''.0$; 9^m erfordern die Correction in Declination um $-2'$.

5968 Kam 4616—7 hat $22^h\,47^m\,8^s.18 - 6°\,46'\,22''.1$; $8^m.9$; die Declination in B. B. VI. S. 334 ist $1'$ südlicher als in den anderen Catalogen; dieser Werth ist also um $+1'$ zu corrigiren.

5989 Die A. R. in den A. N ist nach brieflicher Mittheilung von Bakhuyzen um $-2^s.70$ corrigirt.

5990 Die Richtigkeit dieser Position, obwohl nirgends verzeichnet, wird angezeigt durch die befriedigende Uebereinstimming der Positionen von Comet Wolf 1884, 19 Nov. 1884, in Göttingen und in Ougrée bestimmt, von welcher die erstere auf einen anderen Vergleichstern beruht. Pannekoek in Leiden fand 1899 Juli 17 durch Mikrometer-Anschluss an B. D. $-2°$ 5856 = M_2 12758 einen Stern $22^h\,51^m\,7^s.9 - 2°\,39'.2$; $10^m.5$ also übereinstimmend mit A. N.

6038 Wash. Obs. 1886 N°. 678 $57^s.04, 48''.4$. Aus den Wash. Beob. geht die Richtigkeit der angebrachte Correction von -1^m hervor.

6047 M_1 hat $38^s.60, 42''.8$; 10^m. M_2 $38^s.68, 42''.9$; $9.^m7$. Weisse_1 1240 ist also vermuthlich um $-10''$ zu corrigiren.

6056 In Albany A. G. C. 7976 sind die Grössenschätzungen 7.7, 7.5, 6.7, 6.5; vielleicht veränderlich.

6062 Die Correction $-1'$ nach Romberg, Publ. A. G. XVIII, wird bestätigt durch die entsprechende Berliner Beobachtung der Austria (136) 1875 Nov. 2, A. N. 88 37, welche mit der richtigen Decl. reduciert ist.

6072 Washington Obs. 1880 S. 195 N°. 949 $23^h\,3^m\,14^s.48, 0°\,52'\,30''.8$.

6098 Der Unterschied zwischen den Declinationen in A. N. und Weisse_1 ist $12''$; die Position aus B. D. ist $12^s.6$, $28'.3$, also etwas näher an Kremsmünster.

6151 Im Pulk. Cat. 1875.0 ist bei N°. 5416 die Var. Saec. in A. R. $-0^s.0083$ statt $-0^s.0077$.

6161 E. B. $+0^s.0004 + 0''.043$ nach Bonn, $+0^s.022 + 0''.02$ nach Porter Prop. Mot. 1298.

6162 E. B. + 0s.019 — 0″.14 nach Porter Prop. Mot. 1299; + 0s.0243 — 0″.180 nach Glasgow. Cat. II, S. XXXV.

6175 Die Correction wird bestätigt durch M_1 32337 23h 15m 2s.77 + 0° 55′ 18″.8; 10m, ferner durch die Berliner Beobachtung des Planeten Lomia 17 und 18 October 1871.

6182 E. B. nach Porter Prop. Mot. 1303 + 0s.030 + 0″.18.

6226 Der Stern wurde in keinem Cat. gefunden. Die Richtigkeit der Position geht jedoch hervor aus die Uebereinstimmung der Berliner Meridian- und Refactor-Beobachtung des Planeten Austria 6 Sept. 1875 cf. A. N. 88 S. 31 und 38. Die Refractor-Beob. reducirt auf die Culminationszeit des Planeten giebt 23h 24m 2s.57 + 2° 8′ 2″.5, die Meridian-Beobachtung 2s.44, 1″.2. Durch Mikrometer-Anschluss an Albany A. G. C. 8064 fand Pannekoek in Leiden 17 Juli 1899 23h 23m 46s.6 + 2° 9′.0.

6240 Cambridge (Enge) A. G. C. 14142 3s.28, 49″.4; 8m.2; Ep. 80.1, 9 Beob.

6241 Die Washingtoner R. A. 0s.76 kleiner als A. N. beruht auf 3 Beobachtungen und stimmt besser als Kremsmünster mit B. D. — 12° 6513: 23h 26m 9s.6. Vermuthlich ist also die A. R von Kremsmünster fehlerhaft.

6248 Wird Washington getrennt von Yarnall und Greenwich, so ist nach den Wash. Beob. der Ort 23h 27m 43s.44, — 1° 56′ 13″.9.

6271 Der Stern ist nicht in Weisse aufgenommen. Catalogue of 644 comparison stars, Publ. Carleton observatory Northfield, 631 hat 23h 30m 19s.37 — 3° 39′ 12″.4; 8m.1

6288 Nach brieflicher Mittheilung von Dr. Knorre ist die A. R. nach A. N. um + 0s.05 corrigirt. Weisse_1 672 hat 50s.52, 53″.4.

6294 Nach brieflicher Mittheilung von Dr. Knorre ist die Decl. der A. N. um — 15″.9 corrigirt.

6334 Zwischen der Hamburger Decl. in A. N. und Pulkowa Cat. 1875.0 N°. 5555 zeigte sich ein Unterschied von etwa 40″. Dr. E. F. van de Sande Bakhuyzen beobachtete den Stern am Meridiankreise Sept. 1893 und fand als genäherten Ort 23h 40m 7s.2 — 13° 26′ 56″.5. Die Pulkowaer Declination ist daher unrichtig.

6336 Von Dr. E. F. van de Sande Bakhuyzen 1893 Nov. 9 am Meridiankreis bestimmt.

6369 Cambridge (Engl.) A. G. C. 14312 23h 44m 5s.04, 28° 39′ 19″.4; 9m.4 4 Beob. Die Berliner Declination A. N. 81 scheint also um 10″ fehlerhaft.

6371 Santini_4 2224 hat 23h 44m 28s.68 — 13° 21′ 1″.9; 9m, die Declination bei Santini ist also um — 10′ zu corrigiren.

6396 Karlsruhe Beob. Heft II S. 213 hat 23h 48m 43s.06 — 5° 22′ 0″.2; 7m.5, Heft IV S. 169 hat dagegen 42s.89, 21′ 47″.9. Es scheint also dass die Declination in Heft II um 12″ falsch ist.

6430 Cambridge Engl. A. G. C 14396 23h 54m 6s.72 + 27° 58′ 50″.9, 3 Beob. Die Declination von Kremsmünster A. N. 11″,4 von Cambridge abweichend, scheint also 10″ fehlerhaft.
